The <thead> Tag in HTML 5

The <thead> tag is used to create an area of table headings in HTML. When the table spans multiple pages, such as when a large table on a web page is printed, the table heading code within the **thead** element will appear on each page above the table body.

	Multiple Column Heading	
First Column Heading	Second Column Heading	
Row 1	Row 1 Column 1	Row 1 Column 2
Row 2	Row 2 Column 1	Row 2 Column 2
This is an example of an HTML table footer.		

This is an actual working demo of the table header example code below. (Do *View Source* to verify that this page is using the HTML 5 DOCTYPE. You can also verify it is Valid HTML 5 using the HTML Validator. Try using it to validate URLs with HTML examples from other places that claim to be HTML 5 web sites!)

See the tutorial on Creating HTML Tables for full details on how to create an HTML table using the HTML table tags together.
