*Handbook of Survey Methodology for the Social Sciences* Lior Gideon, 2012-06-21 Surveys enjoy great ubiquity among data collection methods in social research; they are flexible in questioning techniques in the amount of questions asked in the topics covered and in the various ways of interactions with respondents. Surveys are also the preferred method by many researchers in the social sciences due to their ability to provide quick profiles and results. Because they are so commonly used and fairly easy to administer, surveys are often thought to be easily thrown together. But designing an effective survey that yields reliable and valid results takes more than merely asking questions and waiting for the answers to arrive. Geared to the non-statistician, the *Handbook of Survey Methodology in Social Sciences* addresses issues throughout all phases of survey design and implementation. Chapters examine the major survey methods of data collection, providing expert guidelines for asking targeted questions, improving accuracy and quality of responses while reducing sampling and non-sampling bias. Relying on the Total Survey Error theory, various issues of both sampling and non-sampling sources of error are explored and discussed. By covering all aspects of the topic, the *Handbook* is suited to readers taking their first steps in survey methodology as well as to those already involved in survey design and execution and to those currently in training. Featured in the *Handbook*: The Total Survey Error, sampling and non-sampling errors, Survey sampling techniques, The art of question phrasing, Techniques for increasing response rates, A question of ethics: what is allowed in survey research, Survey design: face to face, phone, mail, e-mail, online, computer assisted, Dealing with sensitive issues in surveys, Demographics of respondents, implications for future survey research, Dealing with nonresponse and nonresponse bias. The *Handbook of Survey Methodology in Social Sciences* offers how-to clarity for researchers in the social and behavioral sciences and related disciplines including sociology, criminology, criminal justice, social psychology, education, public health, political science, management and many other disciplines relying on survey methodology as one of their main data collection tools.

**Nonresponse in Social Science Surveys** National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on a Research Agenda for the Future of Social Science Data Collection, 2013-10-26 For many household surveys in the United States responses rates have been steadily declining for at least the past two decades A similar decline in survey response can be observed in all wealthy countries Efforts to raise response rates have used such strategies as monetary incentives or repeated attempts to contact sample members and obtain completed interviews but these strategies increase the costs of surveys This review addresses the core issues regarding survey nonresponse It considers why response rates are declining and what that means for the accuracy of survey results These trends are of particular concern for the social science community which is heavily invested in obtaining information from household surveys The evidence to date makes it apparent that current trends in nonresponse if not arrested threaten to undermine the potential of household surveys to elicit information that assists in understanding social and economic issues The trends also threaten to weaken the validity of inferences drawn from estimates based on those surveys High nonresponse rates create the potential or risk for bias in estimates and affect survey design data collection estimation and analysis The survey community is painfully aware of these trends and has responded aggressively to these threats The interview modes employed by surveys in the public and private sectors have proliferated as new technologies and methods have emerged and matured To the traditional trio of mail telephone and face to face surveys have been added interactive voice response IVR audio computer assisted self interviewing ACASI web surveys and a number of hybrid methods Similarly a growing research agenda has emerged in the past decade or so focused on seeking solutions to various aspects of the problem of survey nonresponse the potential solutions that have been considered range from better training and deployment of interviewers to more use of incentives better use of the information collected in the data collection and increased use of auxiliary information from other sources in survey design and data collection Nonresponse in Social Science Surveys A Research Agenda also documents the increased use of information collected in the survey process in nonresponse adjustment
