

Exploring Generative AI: A Comprehensive Overview

Generative AI - An Overview

Generative AI is a branch of artificial intelligence focused on developing algorithms and models capable of autonomously generating new data samples that closely resemble existing data. Generative AI models learn the underlying patterns and structures present in the training data and use that knowledge to generate new, novel outputs. Such outputs include images, text, audio or even entire virtual environments. This potential to autonomously create new content raises ethical considerations regarding privacy, security, and the responsible use of AI-generated materials.

Working Mechanism of Generative AI Works

Generative AI functions on advanced machine learning algorithms like Generative Adversarial Networks and Variational Autoencoders. These models then generate new data samples by either directly sampling from learned distributions or by transforming existing data in creative ways to refine their ability to produce convincing outputs across various domains, including images, text, audio and more.

Summer School RW 2019 held in Bolzano Italy in September 2019 The research areas of Semantic Web Linked Data and

Knowledge Graphs have recently received a lot of attention in academia and industry Since its inception in 2001 the

Semantic Web has aimed at enriching the existing Web with meta data and processing methods so as to provide Web based

systems with intelligent capabilities such as context awareness and decision support The Semantic Web vision has been driving many community efforts which have invested a lot of resources in developing vocabularies and ontologies for annotating their resources semantically Besides ontologies rules have long been a central part of the Semantic Web framework and are available as one of its fundamental representation tools with logic serving as a unifying foundation Linked Data is a related research area which studies how one can make RDF data available on the Web and interconnect it with other data with the aim of increasing its value for everybody Knowledge Graphs have been shown useful not only for Web search as demonstrated by Google Bing etc but also in many application domains *Innovations in Teaching and Learning for Health Professions Educators* Roger Edwards, Bobbie Ann Adair White, Ardi Findyartini, 2025-06-02 The health professions continue to evolve and change rapidly as more opportunities and challenges emerge Hence health professions educators are required to be adaptive and nimble in their creation and adoption of teaching and learning innovations These innovations have included teaching with technologies like virtual reality gamification online applications and artificial intelligence Innovations also include know how such as emotional intelligence and ways of approaching the learning process through student centered learning experiences grounded in the cognitive science of learning Scholarship related to identification of the best uses of different innovations is difficult The same innovations have proven to be engaging in some contexts and burdensome in others Additionally simulation based education continues to incorporate innovations in how health professions educators are taught with more focus on effectiveness of the simulation educator including applications with distance simulation Training and development for health professions and simulation educators is becoming more formalized yet gaps on effectiveness of training and development efforts persist Faculty effectiveness especially as it relates to educational innovation adoption is difficult to measure and demonstration of related competencies is in its infancy The goal of this Research Topic is to bring together state of the art examples of scholarship in health professions education related to the awareness and appropriate adoption of innovation which is broadly defined as an idea practice technology and know how Evidence about the current state of emerging innovations effectiveness of innovations and evidence about the competencies needed for teaching in our evolving environments are all areas of interest for this collection All types of scholarship can support this focus including analyses based on primary quantitative and qualitative data collection secondary data analyses literature reviews and methodological infrastructure tool development Additionally scholarship investigating how these innovations have influenced health professions educators including their training and development is part of the goal of the collection The scope of this collection covers any innovations that are applicable to professional development and implementation for health professions educators More specifically we invite scholarship related to how educators prepare themselves for meeting the needs of their students given the changing roles and innovations available to both faculty and students across learning environments worldwide Examples of topics of interest include Analyses of innovation related to the

evolving roles of health professions educators Reviews of educational innovation adoption by health professions education faculty especially related to artificial intelligence linked applications Exploring factors associated with professional development training and effective educational innovation adoption by faculty Simulation based educational innovation applications for faculty development Faculty innovation in resource constrained environments in low and middle income countries Methodological challenges associated with studying educational innovations by faculty in health professions education and critical research needs associated with generating and evaluating educational innovations Methodological considerations associated with health professions education faculty competencies Theoretically focused analyses are welcome as long as they are linked to applications **AI Magazine**, 2004 **Entertainment Computing - ICEC 2023**
