Additional suggestions for approaching environmental issues encourage students to think critically      **Tools in Fluvial Geomorphology** G. Mathias Kondolf, Hervé Piégay, 2016-04-28 Fluvial Geomorphology studies the biophysical processes acting in rivers and the sediment patterns and landforms resulting from them. It is a discipline of synthesis with roots in geology, geography and river engineering, and with strong interactions with allied fields such as ecology, engineering and landscape architecture. This book comprehensively reviews tools used in fluvial geomorphology at a level suitable to guide the selection of research methods for a given question. Presenting an integrated approach to the interdisciplinary nature of the subject, it provides guidance for researchers and professionals on the tools available to answer questions on river restoration and management. Thoroughly updated since the first edition in 2003 by experts in their subfields, the book presents state-of-the-art tools that have revolutionized fluvial geomorphology in recent decades, such as physical and numerical modelling, remote sensing and GIS, new field techniques, advances in dating, tracking and sourcing, statistical approaches, as well as more traditional methods such as the systems framework, stratigraphic analysis, form and flow characterisation and historical analysis. This book covers five main types of geomorphological questions and their associated tools: historical framework, spatial framework, chemical, physical and biological methods, analysis of processes and forms, and future understanding framework. Provides guidance on advantages and limitations of different tools for different applications, data sources, equipment and supplies needed, and case studies illustrating their application in an integrated perspective. It is an essential resource for researchers and professional geomorphologists, hydrologists, geologists, engineers, planners and ecologists concerned with river management, conservation and restoration. It is a useful supplementary textbook for upper-level undergraduate and graduate courses in Geography, Geology, Environmental Science, Civil and Environmental Engineering, and interdisciplinary courses in river management and restoration.      **Pathways to Learning Environmental Science** Alan Jacobs, 2014-03-17 Pathways to Learning Environmental Science: A Study Guide for Success is a workbook and study guide designed to be used in conjunction with standard required texts in environmental science and environmental studies courses. Used over the duration of a course, it enhances comprehension, increases retention and improves test scores. The book contains tear-out pages that can easily be attached to class notes or other course materials. Chapters feature questions and fill-in-the-blank exercises allowing students to check their understanding of the subject matter and assess their progress early on. Everything in the book is designed to answer the question 'What do I need to know?' The fourteen chapters of the book cover the many areas involved in environmental science and environmental studies, including chemical, physical, biological and earth science principles, earth spheres and biomes. Also covered are environmental cycles, material and energy resources, pollution and environmental laws and regulations. Each chapter begins with an explanation of the topic to be discussed and indicates where in a textbook students can find complete discussions, figures, charts and tables. Chapter exercises are presented in multiple choice, fill-in-the-blank and matching formats, allowing students many opportunities for self-evaluation.

prior to taking class examinations Of special note is the Rap City in Green feature of the book which reviews major concepts in verse form The musicality of the verses enhances appeal and is a highly effective memory aid Pathways to Learning Environmental Science is an excellent support tool for students in general education environmental science studies courses
