It is interesting that the majority of the students in this sample had a positive response over the 12 month period. This indicates that the students were able to maintain their interest in the course, learning goals and their personal and competency development throughout the year. This suggests that the students were able to engage with the content within the course, and were able to relate the content to their own learning needs. It was predicted that students would have mixed responses to the course based on pre-determined characteristics such as a student's prior knowledge of the course content. However, the highest proportion of students, those students with the lowest prior knowledge of the course content, had positive and consistent responses to most of the course content, while students with the highest prior knowledge of the course content had the lowest positive responses. This may indicate that students with lower prior knowledge of the course content were more interested with course content than those with higher prior knowledge, and this may be reflected in their responses to the course content and their overall satisfaction with the course.
