**Diagram showing moving plates and the process of subduction**

Subducting plates are the reason the Ring of Fire was formed. These large slabs of the Earth's crust move constantly above a layer of solid and molten rock called the mantle. A process called subduction formed the volcanoes. This is when a plate is forced under another plate into the Earth's mantle. Melting of the plates makes magma that shoots up through the overlapping plates. This creates an erupting volcano. It is at the interface and boundary of two plates that earthquakes occur as well. Ocean trenches also form here. The Ring of Fire is home to the deepest one. The Marianas Trench is almost 7 miles deep and located east of Japan.
