## Projectile Motion

When any object is thrown from horizontal at an angle  $\theta$  except  $90^\circ$ , then the path followed by it is called **trajectory**, the object is called **projectile** and its motion is called projectile motion.

If any object is thrown with velocity  $u$ , making an angle  $\theta$ , from horizontal, then

Horizontal component of initial velocity =  $u \cos \theta$ .

Vertical component of initial velocity =  $u \sin \theta$ .

Horizontal component of velocity ( $u \cos \theta$ ) remains same during the whole journey as no acceleration is acting horizontally.

Vertical component of velocity ( $u \sin \theta$ ) decreases gradually and becomes zero at highest point of the path.

At highest point, the velocity of the body is  $u \cos \theta$  in horizontal direction and the angle between the velocity and acceleration is  $90^\circ$ .
