### **Unit 1 The Nature of Science**

**SC.912.N.1.1** Define a problem based on a specific body of knowledge, for example: biology, chemistry, physics, and earth/space science, and follow the steps of the scientific method including: ask questions, conduct observations, examine books and other sources of information, review what is known, plan investigations, use tools to gather analyze and interpret data, pose answers, explanation or descriptions of events, generate explanations (inferences), use appropriate evidence and reasoning, communicate results and evaluate the merits of the explanations produced by others

**SC.912.N.3.4** Recognize that theories do not become laws, nor do laws become theories; theories are well supported explanations and laws are well supported descriptions

**SC.912.N.3.1** Explain that a scientific theory is the culmination of many scientific investigations drawing together all the current evidence concerning a substantial range of phenomena; thus, a scientific theory represents the most powerful explanation scientists have to offer

**SC.912.N.1.3** Recognize that the strength or usefulness of a scientific claim is evaluated through scientific argumentation, which depends on critical and logical thinking, and the active consideration of alternative scientific explanations to explain the data presented

**SC.912.N.1.4** Identify sources of information and assess their reliability according to the strict standards of scientific investigation

**SC.912.N.1.6** Describe how scientific inferences are drawn from scientific observations and provide examples from the content being studied

**SC.912.N.2.1** Identify what is science, what clearly is not science, and what superficially resembles science (but fails to meet the criteria for science)

**SC.912.N.2.2** Identify which questions can be answered through science and which questions are outside the boundaries of scientific investigation, such as questions addressed by other ways of knowing, such as art, philosophy, and religion

**~\*Honors Only:**

**\*Honors: SC.912.N.2.1** Recognize the role of creativity in constructing scientific questions, methods, and explanations.
