Development David Shapiro, 2014-06-15 Today thousands of large scale single page web applications have grown completely out of control. They don't scale. They perform poorly due to inadequate architectural foundations. Development teams find it increasingly difficult to work with them. In *AngularJS Web Component Development* David G. Shapiro shows how to overcome all these challenges with the AngularJS JavaScript framework and component architecture. Shapiro presents comprehensive front end web development strategies built around realistic software user stories, use cases and example implementations, from simple to advanced. Rather than focusing solely on new development, he takes on the challenge most developers really face: how to salvage and improve existing applications and technology investments. Throughout he draws on his own experience at TIBCO where he has used AngularJS to architect and implement the cutting edge Tibbr developer platform APIs and Social Plug-in components. Shapiro's version agnostic coverage is designed to anticipate and accommodate planned enhancements to the AngularJS feature set so the book remains useful for years to come. For instance, this is the only guide that fully discusses the key role that AngularJS can play in supporting functional test driven development using W3C Web Components, the emerging standard for web UI component architecture. In Detail As a developer, haven't you often suffered from writing too much code? More often than not, you rewrite the same piece of code for different pages and end up wasting precious time you could have used more productively. In this course, we introduce you to the world of web components, a fairly new concept that has simplified coding for web developers. Web components allow you to create custom and reusable HTML tags that will work across modern web browsers and can be used with any JavaScript library or web framework that works with HTML. After working through this course, you will be ready to develop production ready web component applications. You will be able to build your own custom components that can be reused again and again. Moreover, you will also be able to share your custom components with other developers. To benefit fully from this course, you need to have at least a basic idea of ES6 concepts such as const, let, classes, map, filters and so on. A basic understanding of JavaScript frameworks such as Angular, React and Vue would be beneficial in order to gain a full understanding of web component integration aspects.
