Cognitive Rigor Karin K. Hess, Ben S. Jones, Dennis Carlock, John R. Walkup, 2009 To teach the rigorous skills and knowledge students need to succeed in future college entry courses and workforce training programs, education stakeholders have increasingly called for more rigorous curricula, instruction, and assessments. Identifying the critical attributes of rigor and measuring its appearance in curricular materials is therefore fundamental to progress in this area. By superposing two widely accepted models for describing rigor, Bloom's Taxonomy of Educational Objectives and Webb's Depth of Knowledge (DOK) model, this article defines cognitive rigor (CR) and introduces the CR matrix for analyzing instruction and enhancing teacher lesson planning. Two large scale collections of student work samples analyzed using the CR matrix are presented, illustrating the preponderance of curricular items aligned to each cell in the matrix. Educators should use the cognitive rigor matrix to align the content in their curricular materials to the instructional techniques used in classroom delivery. Contains 3 tables and 1 figure.

Karin shares how she synthesized ideas from various thinking models with DOK as the foundation to create the Hess Cognitive Rigor Matrices, now used in more than 100 countries. Each module is framed by frequently asked questions and provides practical tools and strategies for applying a cognitive mindset that supports student-centered classrooms from planning instruction that shifts student roles from taking in information to constructing meaning to monitoring progress with assessments that uncover.
