Silent Killer Disease: Dash Diet Cookbook: for Hypertension: and Diabetes Michael Gabriel, 2014-03-16 Silent killer disease are diseases that produces minimum or no symptoms and are capable of causing death if not treated Heart disease hypertension and diabetes are major silent killer diseases High blood pressure hypertension can lead to and make worse many complications of diabetes including diabetic eye disease and kidney disease Most people with diabetes develop high blood pressure during their life Having diabetes makes high blood pressure and other heart and circulation problems more likely because diabetes damages arteries and makes them targets for hardening atherosclerosis Atherosclerosis can cause high blood pressure which if not treated can lead to blood vessel damage stroke heart failure heart attack or kidney failure Three groups were studied with different diabetes interventions The first was given education only The second was on a weight loss program increased physical activity and had a decrease in consumption of salt and alcohol The third had all the interventions of the first but also were put on the dash diet All three groups showed positive health changes but only the one with the dash diet statistically increased insulin sensitivity The dash is a positive step in managing effects of diabetes in addition to the insulin sensitivity This is because many people with diabetes have a higher risk of heart disease and stroke Hypertension increases this risk so a diet that decreases blood pressure will have the benefit of being a tool of prevention of other diseases in individuals with diabetes Develop your relationship with your medical provider and be sure to maintain contact about any questions concerns or changes in your diabetes symptoms All the recipes also include detailed information on calories fat saturated fat sodium carbohydrates Total sugars protein Dietary fiber as well as serving sizes
