Conceptual Maths Peter Mattock, 2023-04-05 Written by Peter Mattock Conceptual Maths Teaching about rather than just how to do mathematics in schools aims to empower teachers to support students on a comprehensive and coherent journey through school mathematics. Showcasing the best models, metaphors and representations it provides excellent examples, explanations and exercises that can be used across the curriculum. Concepts are at the heart of the study of mathematics. They are the ideas that remain constant whenever they are encountered but which combine and build upon each other to create the mathematical universe. It is the structure of each concept that gives rise to the procedures that are used in calculation and problem solving and by learning about these structures a learner can make sense of how different processes work and use them flexibly as need demands. In his first book *Visible Maths* Peter Mattock focused on the use of representations and manipulatives as images and tools and how this can provide a window into some of these mathematical structures. His aim in *Conceptual Maths* is to go deeper beyond the procedures and to shed greater light on the structures of the subject's different concepts. The book explores how a variety of visual tools and techniques can be used in the classroom to deepen pupils' understanding of mathematical structures, concepts and operations including number, addition and subtraction, multiplication and multiples, division and factors, proportionality, functionality, measures, accuracy, probability, shape and transformation, and vectors among many others. In so doing Peter equips teachers with the confidence and practical know-how to help learners assimilate knowledge of mathematical concepts into their schema and take their learning to the next level. Containing numerous full colour diagrams and models to illustrate the conceptual takeaways and teaching techniques discussed, *Conceptual Maths* also includes a glossary covering the key mathematical terms. Suitable for teachers of maths in primary, secondary and post 16 settings.

Storycraft Jon Mayhew, Martin Griffin, 2020-01-22 Martin Griffin and Jon Mayhew's *Storycraft* How to teach narrative writing is an inspiring and practical resource to support secondary school teachers in developing their students' creative writing. This book is not a style manual. Authors Martin Griffin and Jon Mayhew think there are plenty of those about. Instead it picks apart the craft of narrative writing and equips teachers with activities designed to help their students overcome the difficulties they experience when tasked with creating something from nothing. Written by two fiction writers and English teachers with over forty years combined experience in education, *Storycraft* packs in expert guidance relating to idea generation and the nature of story and provides off-the-peg writing prompts that teachers can immediately adopt and adapt in the classroom. The book breaks down the simple components that must be in place for a narrative to work, the crafting of character, setting, shape and structure, and shares fifty-one stimulating activities that will get students writing narratives regularly more creatively and with greater confidence. Martin and Jon also include helpful advice in a chapter dedicated to the process of editing in which they provide activities designed to help students diagnose and improve misfiring narratives and they close the book with invaluable tips for GCSE exam preparation written directly for students and with an impending creative writing exam in mind. Suitable for English teachers of students aged eleven to
