Singularities Landmarks On The Pathways Of Life:

Singularities Christian de Duve, 2005-10-24 Erwin Schrödinger's *What is Life* published 60 years ago influenced much of the development of molecular biology. In this new book Christian De Duve, Nobel Laureate and pioneer of modern cell biology, presents a contemporary response to this classic, providing a sophisticated consideration of the key steps or bottlenecks that constrain the origins and evolution of life. De Duve surveys the entire history of life, including insights into the conditions that may have led to its emergence. He uses as landmarks the many remarkable singularities along the way, such as the single ancestry of all living beings, the universal genetic code, and the monophyletic origin of eukaryotes. The book offers a brief guided tour of biochemistry and phylogeny, from the basic molecular building blocks to the origin of humans. Each successive singularity is introduced in a sequence paralleling the hypothetical development of features and conditions on the primitive earth, explaining how and why each transition to greater complexity occurred. Concepts of morphology Aa.

Vv., 2014-05-08T00:00:00+02:00 Morphology is the general theory of form and formation, which can be seen as the innovative and fruitful point of intersection of the old two cultures: the scientific and the humanistic. The three papers presented in the book by Olaf Breidbach, Pietro Corvaja, and Angelo Vianello respectively illustrate different features of morphology from the epistemic viewpoints of history of science, mathematics, and biology. The texts were produced in the context of the second meeting of the Centro Interdipartimentale di Morfologia F. Moiso, which took place in Udine on the 14 December 2007.

Earth's Early Atmosphere and Oceans, and The Origin of Life George H. Shaw, 2015-10-07 This book provides a comprehensive treatment of the chemical nature of the Earth's early surface environment and how that led to the origin of life. This includes a detailed discussion of the likely process by which life emerged, using as much quantitative information as possible. The emergence of life and the prior surface conditions of the Earth have implications for the evolution of Earth's surface environment over the following 2.25 billion years. The last part of the book discusses how these changes took place and the evidence from the geologic record that supports this particular version of early and evolving conditions. Fitness of the Cosmos for Life John D. Barrow, 2008 An interdisciplinary book for scientists interested in the origin and existence of life in our universe, first published in 2007. *From Stardust to First Cells* Sankar Chatterjee, 2023-09-20 This book presents a groundbreaking hypothesis to answer one of the greatest scientific mysteries: How did life begin? Like a detective piecing together seemingly disparate bits of evidence, Dr. Sankar Chatterjee combines the most recent discoveries in cosmology, geology, chemistry, information systems, and biology, weaving a vast tapestry from the threads of current research. Dr. Chatterjee convincingly argues that the odyssey of life first began when the fundamental building blocks were brought to Earth by meteorites. These cosmic compounds concentrated and simmered like a soup in hydrothermal crater caldrons. Through a system of subterranean vent networks, a biosynthetic rich variety of organic compounds mixed and matched into a recipe of rich biomolecules, guided by prebiotic information systems. Through symbiosis, these complex biopolymers gradually

assemble into membrane bound protocells At each stage of this evolutionary progression through natural selection they refined with increasing stability and complexity ultimately leading to the emergence of the first cells about four billion years ago In this book Dr Chatterjee tells this story in rigorous detail in language that is both accessible and engaging The Tao of Chemistry and Life Eugene H. Cordes,2009-06-04 Written with the non scientist in mind this book employs the molecule and its interactions to explain the characteristics of living organisms in terms of the underlying chemistry of life Following introductory chapters on the fundamentals of life attention then turns to small molecules such as hormones and neurotransmitters and subsequently to macromolecules including proteins and nucleic acids The interactions between small and macromolecules remains a central point throughout the book These include enzymatic catalysis hormone action neurotransmission regulation of metabolism biosynthesis of macromolecules the mechanism of action of drugs taste olfaction learning and memory and chemical communication A second central point of emphasis is the sensitive relationship between chemical structure and biological activity Examples abound and include why subtle changes in fatty acid architecture have positive or negative outcomes for human health in omega three fatty acids and trans fats and how modest changes in the chemical decoration of the steroid skeleton provide the difference between male and female sex hormones Beyond these examples taken from the chemistry of small molecules the book includes a thoughtful consideration of genomics including the relationship between genome structure and species The theme of human health appears throughout the book Cardiovascular medicine cancer metabolic diseases and diseases of the nervous system receive significant attention including consideration of how a variety of drugs work in combating these issues In sum the goal of this book is to inform the non scientist community in a way that will lead to increased understanding of the relationship between chemistry and life **The Laws of Evolution and Derived Lawlike Principles** Sacha Haywood,2007 The Laws of Evolution questions our current understanding of the laws that govern our universe and its evolution Life Strategies of Microorganisms in the Environment and in Host Organisms Rudolf Amann,2008 The Neurobiology of Social Recognition, Attraction and Bonding Royal Society (Great Britain). By Design Jonathan D. Sarfati,Jonathan Sarfati, Ph.D.,2008 At last a definitive work on design by a leading biblical creationist Today the ID intelligent design movement is capturing headlines and igniting controversy around the world But in the process many are coming to think that a credible challenge to the dominant Darwinian naturalism of our time means backing away from a clear stand for the truth of the Bible Now creationist heavyweight Jonathan Sarfati whose *Refuting Evolution* has the most copies in print of any creation book ever challenges this mindset head on In the process *By Design* is set to become a classic of the creation movement in the same vein as Dr Sarfati s comprehensive *Refuting Compromise* which is arguably the most powerful biblical and scientific defense of straightforward Genesis in existence Back cover
