time an explanation of why the RCA Living Stereo series of legacy recordings from the 1950s and 60s is still appreciated by music lovers worldwide despite their use of an apparently incorrect recording technique from the perspective of psychoacoustics. Discussing this aspect in detail, the book draws on the author's study of concert hall acoustics and psychoacoustics. The book also analyzes the fingerprint features of a selected number of surround and more importantly stereo microphone techniques in depth by measuring their signal cross correlation over frequency and also using an artificial human head. In addition, the book presents a rating of microphone techniques based on the assessment of various acoustic attributes and merges the results of several subjective listening tests including those conducted by other researchers. Building on this knowledge, it provides fresh insights into important microphone system features from stereo to 3D audio. Moreover, it describes new microphone techniques such as AB, PC, ORTF, T and BPT and the recently defined BQIrep Binaural Quality Index of reproduced music. Lastly, the book concludes with a short history of microphone techniques and case studies of live and studio recordings.

**Microphone Techniques in Stereo and Surround Recording** Adam Rosiński, 2022-11-22

Sound engineering is one of the fastest growing branches of music production. The need for a broad-based discussion on the

issues constituting the art of sound engineering persists and loses none of its relevance revealing that sound engineering should not be investigated only in the mathematical and physical context musical acoustics or the engineering aspect signal processing and modification Publications targeted primarily at musicians are few and far between which is why the mutual understanding for different priorities which effectively concern the same issues faced by the engineer the acoustician and the musician seems to be a complex problem and the main concept explored in this publication This book is intended for musicians or sound directors but also acousticians and sound engineers wishing to learn how the musicians think The monograph is also addressed to musicians who intend to record their material in the studio in the near future but do not possess knowledge on studio construction studio workflow or the art of recording It seems important to familiarize the musicians with the reality that awaits them on the other side of the glass thus fostering their responsibility for the work jointly produced by them entering the studio and the sound director
