Tissue Engineering Using Ceramics And Polymers:

Tissue Engineering Using Ceramics and Polymers Aldo R. Boccaccini, J Gough, 2007-10-31 Technology and research in the field of tissue engineering has drastically increased within the last few years to the extent that almost every tissue and organ of the human body could potentially be regenerated. With its distinguished editors and international team of contributors, Tissue Engineering using Ceramics and Polymers reviews the latest research and advances in this thriving area and how they can be used to develop treatments for disease states. Part one discusses general issues such as ceramic and polymeric biomaterials, scaffolds, transplantation of engineered cells, surface modification and drug delivery. Later chapters review characterisation using x-ray photoelectron spectroscopy and secondary ion mass spectrometry as well as environmental scanning electron microscopy and Raman micro spectroscopy. Chapters in part two analyse bone regeneration and specific types of tissue engineering and repair such as cardiac, intervertebral disc, skin, kidney and bladder tissue. The book concludes with the coverage of themes such as nerve bioengineering and the micromechanics of hydroxyapatite based biomaterials and tissue scaffolds. Tissue Engineering using Ceramics and Polymers is an innovative reference for professionals and academics involved in the field of tissue engineering. An innovative and up to date reference for professionals and academics. Environmental scanning electron microscopy is discussed. Analyses bone regeneration and specific types of tissue engineering.

Inorganic Biomaterials Xiang C Zhang, 2014-06-26 This book provides a practical guide to the use and applications of inorganic biomaterials. It begins by introducing the concept of inorganic biomaterials which includes bioceramics and bioglass. This concept is further extended to hybrid biomaterials consisting of inorganic and organic materials to mimic natural biomaterials. The book goes on to provide the reader with information on biocompatibility, bioactivity and bioresorbability. The concept of the latter is important because of the increasing role resorbable biomaterials are playing in implant applications. The book also introduces a new concept on mechanical compatibility. Almost all implant biomaterials employed to date such as metal and ceramic implants do not meet this biological requirement as they have far higher modulus than any biomaterials in the body. The practical techniques that are used in the characterization of biomaterials including chemical, physical, biological, microscopy and mechanical characterization are described. Some specialised techniques are also introduced such as Synchrotron Micro Computed Tomography, u CT and Magnetic Resonance Imaging, MRI. The reader is given important information on new biomaterials development for orthopaedic and other areas including controlled release technology, hydroxyapatite and hybrid bioresorbable materials. Finally, the book provides a guide to regulatory considerations, an area which is often overlooked but is an important part of R D and manufacturing of medical materials and devices.

Regenerative Medicine and Biomaterials for the Repair of Connective Tissues Charles Archer, Jim Ralphs, 2010-01-12 Regenerative medicine for the repair of connective tissues is a fast moving field which generates a lot of interest. Unfortunately, the biomaterials and biomechanics for soft tissue repair has been under represented in the past.

Particularly the natural association between cartilage tendons and ligaments is often not made Regenerative medicine and biomaterials for the repair of connective tissues addresses this gap in the market by bringing together the natural association of cartilage tendons and ligaments to provide a review of the different structures biomechanics and more importantly provide a clear discussion of practical techniques and biomaterials which may be used to repair the connective tissues Part one discusses cartilage repair and regeneration with chapters on such topics as structure biomechanics and repair of cartilage Chapters in Part two focus on the repair of tendons on ligaments with particular techniques including cell based therapies for the repair and regeneration of tendons and ligaments and scaffolds for tendon and ligament tissue engineering Addresses the natural association between cartilage tendons and ligaments which is often not made Provides a review of the different structures biomechanics and practical techniques which are used in the repair of connective tissues Chapters focus on such areas as cartilage repair and regeneration the repair of tendons and ligaments investigating techniques including scaffolds and cell based therapies
