This manual of problems is intended primarily as an aid to instructors teaching from the second volume of the Berkeley Physics Course. They will, I hope, find the material a useful supplement to the text. The solutions for the less routine problems often include some explanations going beyond the bare requirements of the problem. The instructor would be well advised to peruse the solutions for the more routine problems before he assigns them -- if only to be warned of traps which were not always foreseen when the problems were devised.

The solutions were checked by Thomas Knight, who found some errors and made many valuable suggestions for improvement and clarification. Gary Anderson who feels that the course in his class would be improved if he noticed that the author made some mistakes in working his own problems is hereby invited to do so. Numerical errors may still turn up. Notices of errors would be most welcome, but would any other suggestion for improvement of the material be the material. Please address any suggestions to the undersigned at Lyman Laboratory, Harvard University, Cambridge, Mass. 02138.

Appropriate parts of this material may be detached and posted, or with copyright notice displayed, may be reproduced in part or in whole for the public. We do not, however, recommend that the entire material be made available to students.
