Fillmore, 1996-04-19 The subject of operator algebras has experienced tremendous growth in recent years with significant applications to areas within algebraic mathematics as well as allied areas such as single operator theory non self adjoint operator algebras K theory knot theory ergodic theory and mathematical physics This book makes recent developments in operator algebras accessible to the non specialist Analysis on Semigroups John F. Berglund, Hugo D. Junghenn, Paul Milnes, 1989 This treatment of analysis on semigroups stresses the functional analytical and dynamical theory of continuous representations of semitopological semigroups Topics covered include compact semitopological semigroups invariant means and idempotent means on compact semitopological semigroups affine compactifications left multiplicatively continuous functions and weakly left continuous functions compactifications of infinite direct products and weakly almost periodic semigroups of Markov operators Contains over 200 exercises from simple applications and examples to further developments of the theory Notes on Fermat's Last Theorem A. J. Van Der Poorten, 1996-02-16 This book offers the first serious treatment of Fermat's Last Theorem since Wiles's proof It is based on a series of lectures given by the author to celebrate Wiles's achievement with each chapter explaining a separate area of number theory as it pertains to Fermat's Last Theorem Together they provide a concise history of the theorem as well as a brief discussion of Wiles's proof and its implications Requiring little more than one year of university mathematics and some interest in formulas this overview provides many useful tips and cites numerous references for those who desire more mathematical detail **Lie Algebras with Triangular Decompositions** Robert V. Moody, Arturo Pianzola, 1995-04-17 Imparts a self contained development of the algebraic theory of Kac Moody algebras their representations and close relatives the Virasoro and Heisenberg algebras Focuses on developing the theory of triangular decompositions and part of the Kac Moody theory not specific to the affine case Also covers lattices and finite root systems infinite dimensional theory Weyl groups and conjugacy theorems Conformal Invariants, Inequalities, and Quasiconformal Maps Glen D. Varadarayan recasts Wall's obstruction proofs in algebraic terms, the proofs depending upon results from algebraic number theory and on K-theoretic induction theorems and ends with a study of finitely dominated nilpotent spaces.
