**Toric Varieties** David A. Cox,John B. Little, Henry K. Schenck, 2011 Toric varieties form a beautiful and accessible part of modern algebraic geometry. This book covers the standard topics in toric geometry a novel feature is that each of the first nine chapters contains an introductory section on the necessary background material in algebraic geometry. Other topics covered include quotient constructions, vanishing theorems, equivariant cohomology, GIT quotients, the secondary fan, and the minimal model program for toric varieties. The subject lends itself to rich examples reflected in the 134 illustrations included in the text. The book also explores connections with commutative algebra and polyhedral geometry, treating both polytopes and their unbounded cousins, polyhedra. There are appendices on the history of toric varieties and the computational tools available to investigate nontrivial examples in toric geometry. Readers of this book should be familiar with the material covered in basic graduate courses in algebra and topology and to a somewhat lesser degree complex analysis. In addition, the authors assume that the reader has had some previous experience with algebraic geometry at an advanced undergraduate level. The book will be a useful reference for graduate students and researchers who are interested in algebraic geometry, polyhedral geometry and toric varieties.

*Birational Geometry and Moduli Spaces* Elisabetta Colombo, Barbara

Fantechi, Paola Frediani, Donatella Iacono, Rita Pardini, 2020-02-25 This volume collects contributions from speakers at the INdAM Workshop Birational Geometry and Moduli Spaces which was held in Rome on 11–15 June 2018. The workshop was devoted to the interplay between birational geometry and moduli spaces and the contributions of the volume reflect the same idea, focusing on both these areas and their interaction. In particular the book includes both surveys and original papers on irreducible holomorphic symplectic manifolds, Severi varieties, degenerations of Calabi–Yau varieties, uniruled threefolds, toric Fano threefolds, mirror symmetry, canonical bundle formula, the Lefschetz principle, birational transformations and deformations of diagrams of algebras. The intention is to disseminate the knowledge of advanced results and key techniques used to solve open problems. The book is intended for all advanced graduate students and researchers interested in the new research frontiers of birational geometry and moduli spaces.

*Polytopes - Proceedings Of The Summer Workshop On Lattice Polytopes* Takayuki Hibi, Akiyoshi Tsuchiya, 2019-05-30 This volume consists of research papers and expository survey articles presented by the invited speakers of the Summer Workshop on Lattice Polytopes. Topics include enumerative algebraic and geometric combinatorics on lattice polytopes, topological combinatorics, commutative algebra and toric varieties. Readers will find that this volume showcases current trends on lattice polytopes and stimulates further developments of many research areas surrounding this field. With the survey articles, research papers and open problems, this volume provides its fundamental materials for graduate students to learn and researchers to find exciting activities and avenues for further exploration on lattice polytopes.

**Geometry and Integrable Systems** Chris Athorne, Diane MacLagan, Ian Strachan, 2012 This volume contains the

proceedings of the conference on tropical geometry and integrable systems held July 3-8 2011 at the University of Glasgow United Kingdom One of the aims of this conference was to bring together researchers in the field of tropical geometry and its applications from apparently disparate ends of the spectrum to foster a mutual understanding and establish a common language which will encourage further developments of the area This aim is reflected in these articles which cover areas from automata through cluster algebras to enumerative geometry In addition two survey articles are included which introduce ideas from researchers on one end of this spectrum to researchers on the other This book is intended for graduate students and researchers interested in tropical geometry and integrable systems and the developing links between these two areas

*Special Metrics and Group Actions in Geometry* Simon G. Chiossi, Anna Fino, Emilio Musso, Fabio Podestà, Luigi Vezzoni, 2017-11-27 The volume is a follow up to the INdAM meeting Special metrics and quaternionic geometry held in Rome in November 2015 It offers a panoramic view of a selection of cutting edge topics in differential geometry including 4 manifolds quaternionic and octonionic geometry twistor spaces harmonic maps spinors complex and conformal geometry homogeneous spaces and nilmanifolds special geometries in dimensions 5-8 gauge theory symplectic and toric manifolds exceptional holonomy and integrable systems The workshop was held in honor of Simon Salamon a leading international scholar at the forefront of academic research who has made significant contributions to all these subjects The articles published here represent a compelling testimony to Salamon's profound and longstanding impact on the mathematical community Target readership includes graduate students and researchers working in Riemannian and complex geometry Lie theory and mathematical physics

[Research Directions in Symplectic and Contact Geometry and Topology](#) Bahar Acu, Catherine Cannizzo, Dusa McDuff, Ziva Myer, Yu Pan, Lisa Traynor, 2022-02-02 This book highlights a number of recent research advances in the field of symplectic and contact geometry and topology and related areas in low dimensional topology This field has experienced significant and exciting growth in the past few decades and this volume provides an accessible introduction into many active research problems in this area The papers were written with a broad audience in mind so as to reach a wide range of mathematicians at various levels Aside from teaching readers about developing research areas this book will inspire researchers to ask further questions to continue to advance the field The volume contains both original results and survey articles presenting the results of collaborative research on a wide range of topics These projects began at the Research Collaboration Conference for Women in Symplectic and Contact Geometry and Topology WiSCon in July 2019 at ICERM Brown University Each group of authors included female and nonbinary mathematicians at different career levels in mathematics and with varying areas of expertise This paved the way for new connections between mathematicians at all career levels spanning multiple continents and resulted in the new collaborations and directions that are featured in this work

*Interactions with Lattice Polytopes* Alexander M. Kasprzyk, Benjamin Nill, 2022-06-08 This book collects together original research and survey articles highlighting the fertile interdisciplinary applications of convex lattice

polytopes in modern mathematics. Covering a diverse range of topics including algebraic geometry, mirror symmetry, symplectic geometry, discrete geometry and algebraic combinatorics, the common theme is the study of lattice polytopes. These fascinating combinatorial objects are a cornerstone of toric geometry and continue to find rich and unforeseen applications throughout mathematics. The workshop 'Interactions with Lattice Polytopes' assembled many top researchers at the Otto von Guericke University Magdeburg in 2017 to discuss the role of lattice polytopes in their work and many of their presented results are collected in this book. Intended to be accessible, these articles are suitable for researchers and graduate students interested in learning about some of the wide ranging interactions of lattice polytopes in pure mathematics.

**String-Math 2011** Jonathan Block, 2012 The nature of interactions between mathematicians and physicists has been thoroughly transformed in recent years. String theory and quantum field theory have contributed a series of profound ideas that gave rise to entirely new mathematical fields and revitalized older ones. The influence flows in both directions with mathematical techniques and ideas contributing crucially to major advances in string theory. A large and rapidly growing number of both mathematicians and physicists are working at the string theoretic interface between the two academic fields. The String Math conference series aims to bring together leading mathematicians and mathematically minded physicists working in this interface. This volume contains the proceedings of the inaugural conference in this series, String Math 2011, which was held June 6–11, 2011 at the University of Pennsylvania.

**Geometry of Toric Varieties** Laurent Bonavero, Michel Brion, 2002 Toric varieties form a beautiful class of algebraic varieties which are often used as a testing ground for verifying general conjectures in algebraic geometry, for example in Hilbert schemes, singularity theory, Mori theory and so on. This volume gathers expanded versions of lectures presented during the summer school of Geometry of Toric Varieties in Grenoble, France. These lectures were given during the second and third weeks of the school. The first week was devoted to introductory material. The paper by D. Cox is an overview of recent work in toric varieties and its applications, putting the other contributions of the volume into perspective.

**A Concise Introduction to Algebraic Varieties** Brian Osserman, 2021-12-02 A Concise Introduction to Algebraic Varieties is designed for a one term introductory course on algebraic varieties over an algebraically closed field and it provides a solid basis for a course on schemes and cohomology or on specialized topics such as toric varieties and moduli spaces of curves. The book balances generality and accessibility by presenting local and global concepts such as nonsingularity, normality and completeness using the language of atlases, an approach that is most commonly associated with differential topology. The book concludes with a discussion of the Riemann–Roch theorem, the Brill–Noether theorem and applications. The prerequisites for the book are a strong undergraduate algebra course and a working familiarity with basic point set topology. A course in graduate algebra is helpful but not required. The

book includes appendices presenting useful background in complex analytic topology and commutative algebra and provides plentiful examples and exercises that help build intuition and familiarity with algebraic varieties **Mathematical Research Letters** ,2006 **Geometry & Topology** ,1997 **Annales de l'Institut Fourier** Institut Fourier,1949

**Compositio Mathematica** ,2008 **Toric Topology** Victor M. Buchstaber,Taras E. Panov,2015-07-15 This book is about toric topology a new area of mathematics that emerged at the end of the 1990s on the border of equivariant topology algebraic and symplectic geometry combinatorics and commutative algebra It has quickly grown into a very active area with many links to other areas of mathematics and continues to attract experts from different fields The key players in toric topology are moment angle manifolds a class of manifolds with torus actions defined in combinatorial terms Construction of moment angle manifolds relates to combinatorial geometry and algebraic geometry of toric varieties via the notion of a quasitoric manifold Discovery of remarkable geometric structures on moment angle manifolds led to important connections with classical and modern areas of symplectic Lagrangian and non Kaehler complex geometry A related categorical construction of moment angle complexes and polyhedral products provides for a universal framework for many fundamental constructions of homotopical topology The study of polyhedral products is now evolving into a separate subject of homotopy theory A new perspective on torus actions has also contributed to the development of classical areas of algebraic topology such as complex cobordism This book includes many open problems and is addressed to experts interested in new ideas linking all the subjects involved as well as to graduate students and young researchers ready to enter this beautiful new area
