**Battery Test Manual For Plug-In Hybrid Electric Vehicles, Revision 3**, 2015 This battery test procedure manual was prepared for the United States Department of Energy DOE Office of Energy Efficiency and Renewable Energy EERE Vehicle Technologies Office. It is based on technical targets for commercial viability established for energy storage development projects aimed at meeting system level DOE goals for Electric Vehicles EV. The specific procedures defined in this manual support the performance and life characterization of advanced battery devices under development for EVs. However, it does share some methods described in the previously published battery test manual for plug in hybrid electric vehicles. Due to the complexity of some of the procedures and supporting analysis, future revisions including some modifications and clarifications of these procedures are expected. As in previous battery and capacitor test manuals, this version of the manual defines testing methods for full size battery systems along with provisions for scaling these tests for modules, cells or other subscale level devices. The DOE United States Advanced Battery Consortium USABC Technical Advisory Committee TAC supported the development of the manual. Technical Team points of contact responsible for its development and revision are Chul Bae of Ford Motor Company and Jon P. Christophersen of the Idaho National Laboratory. The development of this manual was funded by the United States
