## Chapter 1: The Systems Analyst and Information Systems Development

### Answer to Your Turn 1-1: Being an Analyst

Student answers will vary, depending on their preferences regarding being a: 1) systems analyst, 2) business analyst, 3) requirements analyst, 4) infrastructure analyst, or 5) change management analyst. Verify that the student has correctly associated the skills needed with the type of analyst for which they aspire and that the student has created a plan to acquire those skills. The roles and the names used to describe them may vary from organization to organization.

### Answer to Your Turn 1-2: Implementing a Satellite Data Network

While answers may vary, answers might include the following:

1. A Cost-Benefit analysis, along with other financial processes (ROI, etc.) would certainly reveal that a just-in-time (JIT) inventory can reduce inventory costs and increase revenue. A standard communication line, encrypted or not, would not be able to handle the high bandwidth needed for data, voice and video transmissions.
2. A competitor would be able to narrow the gap by adopting the JIT type of inventory management. Voice and video are not necessary to keep the inventory up to date on a timely basis, data transmissions alone would work well.

McCabe, 2010-07-26 Traditionally networking has had little or no basis in analysis or architectural development with designers relying on technologies they are most familiar with or being influenced by vendors or consultants However the landscape of networking has changed so that network services have now become one of the most important factors to the success of many third generation networks It has become an important feature of the designer's job to define the problems that exist in his network choose and analyze several optimization parameters during the analysis process and then prioritize and evaluate these parameters in the architecture and design of the system Network Analysis Architecture and Design Third Edition uses a systems methodology approach to teaching these concepts which views the network and the environment it impacts as part of the larger system looking at interactions and dependencies between the network and its users applications and devices This approach matches the new business climate where customers drive the development of new services and the book discusses how networks can be architected and designed to provide many different types of services to customers With a number of examples analogies instructor tips and exercises this book works through the processes of analysis architecture and design step by step giving designers a solid resource for making good design decisions With examples guidelines and general principles McCabe illuminates how a network begins as a concept is built with addressing protocol routing and management and harmonizes with the interconnected technology around it Other topics covered in the book are learning to recognize problems in initial design analyzing optimization parameters and then prioritizing these parameters and incorporating them into the architecture and design of the system This is an essential book for any professional that will be designing or working with a network on a routine basis Substantially updated design content includes ad hoc networks GMPLS IPv6 and mobile networking Written by an expert in the field that has designed several large scale networks for government agencies universities and corporations Incorporates real life ideas and experiences of many expert designers along with case studies and end of chapter exercises      Solutions Manual for A. methods from each discipline the volume aims to alert researchers to new and exciting possibilities of text analyses across their own disciplinary boundary The volume builds on the fact that each of the disciplines has a common interest in extracting information from political texts The focus on political texts thus facilitates interdisciplinary cross overs The volume also includes chapters combining methods as examples of cross disciplinary endeavours These chapters present an open discussion of the constraints and disadvantages of either quantitative or qualitative methods when evaluating the possibilities of combining analytic tools
