Comet for Data Science Angelica Lo Duca,Gideon Mendels,2022-08-26 Gain the key knowledge and skills required to manage data science projects using Comet Key Features Discover techniques to build monitor and optimize your data science projects Move from prototyping to production using Comet and DevOps tools Get to grips with the Comet experimentation platform Book Description This book provides concepts and practical use cases which can be used to quickly build monitor and optimize data science projects Using Comet you will learn how to manage almost every step of the data science process from data collection through to creating deploying and monitoring a machine learning model The book starts by explaining the features of Comet along with exploratory data analysis and model evaluation in Comet You ll see how Comet gives you the freedom to choose from a selection of programming languages depending on which is best suited to your needs Next you will focus on workspaces projects experiments and models You will also learn how to build a narrative from your data using the features provided by Comet Later you will review the basic concepts behind DevOps and how to extend the GitLab DevOps platform with Comet further enhancing your ability to deploy your data science projects Finally you will cover various use cases of Comet in machine learning NLP deep learning and time series analysis gaining hands on experience with some of the most interesting and valuable data science techniques available By the end of this book you will be able to confidently build data science pipelines according to bespoke specifications and manage them through Comet What you will learn Prepare for your project with the right data Understand the purposes of different machine learning algorithms Get up and running with Comet to manage and monitor your pipelines Understand how Comet works and how to get the most out of it See how you can use Comet for machine learning Discover how to integrate Comet with GitLab Work with Comet for NLP deep learning and time series analysis Who this book is for This book is for anyone who has programming experience and wants to learn how to manage and optimize a complete data science lifecycle using Comet and other DevOps platforms Although an understanding of basic data science concepts and programming concepts is needed no prior knowledge of Comet and DevOps is required Mathematics & Science in the Real World ,2000 **National Educators' Workshop:**

Update 1998. Standard Experiments in Engineering, Materials Science, and Technology ,1999 Information Modelling and Knowledge Bases XXXI Ajantha Dahanayake,Janne Huiskonen,Yasushi Kiyoki,Bernhard Thalheim,Hannu Jaakkola,Naofumi Yoshida,2020-01-06 Information modeling and knowledge bases have become an important area of academic and industry research in the 21st century addressing complexities of modeling that reach beyond the traditional borders of information systems and academic computer science research This book presents 32 reviewed selected and updated papers delivered at the 29th International Conference on Information Modeling and Knowledge Bases EJC2019 held in Lappeenranta Finland from 3 to 7 June 2019 In addition two papers based on the keynote presentations and one paper edited from the discussion of the panel session are included in the book The conference provided a forum to exchange

scientific results and experience and attracted academics and practitioners working with information and knowledge. The papers cover a wide range of topics ranging from knowledge discovery through conceptual and linguistic modeling, knowledge and information modeling and discovery, cross-cultural communication and social computing, environmental modeling and engineering, and multimedia data modeling and systems to complex scientific problem solving. The conference presentation sessions Learning and Linguistics Systems and Processes, Data and Knowledge Representation Models and Interface Formalizations and Reasoning Models, and Modeling Machine Learning Models and Programming Environment and Predictions and Emotion Modeling and Social Networks reflect the main themes of the conference. The book also includes 2 extended publications of keynote addresses: Philosophical Foundations of Conceptual Modeling and Sustainable Solid Waste Management using Life Cycle Modeling for Environmental Impact Assessment, as well as additional material covering the discussion and findings of the panel session. Providing an overview of current research in the field, the book will be of interest to all those working with information systems, information modeling, and knowledge bases.

Applied Computer Science for GGOS Observatories Alexander N.J. Neidhardt, 2017-08-08. This book combines elementary theory from computer science with real-world challenges in global geodetic observation based on examples from the Geodetic Observatory Wettzell, Germany. It starts with a step-by-step introduction to developing stable and safe scientific software to run successful software projects. The use of software toolboxes is another essential aspect that leads to the application of generative programming. An example is a generative network middleware that simplifies communication. One of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques. The complete software design of a satellite laser ranging system is taken as an example. Such automated systems are then combined for global interaction using secure communication tunnels for remote access. The network of radio telescopes is used as a reference. Combined observatories form coordinated multi-agent systems and offer solutions for operational aspects of the Global Geodetic Observing System GGOS with regard to Industry 4.0.
