

Bike Setup

When we think about setting up a "Special" bike, we tend to get caught up in the details of the bike's components and the technical aspects of the bike. But the most important part of the bike is the rider. The bike is only as good as the rider who is riding it. So, when you're setting up your bike, make sure you're taking into account the needs of the rider. This means making sure the bike is comfortable, safe, and efficient. It also means making sure the bike is fun to ride. After all, that's the whole point of having a "Special" bike, right?

Seat Post Height Positioning

1. Measure the distance from the bottom bracket to the center of the seat post. This is the "seat post height." Adjust the seat post height so that the rider's leg is almost fully extended at the bottom of the pedal stroke. A common rule of thumb is to set the seat post height to 73% of the rider's inseam.
2. Most bikes have a "seat post clamp" that allows you to adjust the seat post height. To adjust the seat post height, loosen the seat post clamp, move the seat post up or down to the desired height, and then tighten the seat post clamp.
3. Be careful not to over-tighten the seat post clamp. If you do, you may damage the seat post or the frame of the bike.
4. If the seat is uncomfortable, try adjusting the seat post height. A common rule of thumb is to set the seat post height to 73% of the rider's inseam.
5. The seat should be level and not tilted back or forward.

SAFETY CHECK

Before you ride, make sure the seat post is properly secured and the seat is level.

Fore and Aft Seat Positioning

- The seat should be parallel to the floor. The front of the seat should be at the same height as the back of the seat.

Fore and Aft Handlebar Positioning
