

SQL Guide

OVERVIEW OF SQL

- SQL (Structured Query Language): A standard language for accessing data stored in databases.
- While it is "standardized," there are many variations, each with its own proprietary extensions and features.
- The latest standard is ANSI SQL-99 (which was preceded by SQL-92).
- This guide will discuss the ANSI SQL-99 standard and variations, implemented in Microsoft SQL Server, 2000 (other versions of Microsoft SQL Server and other database vendors are similar to the content discussed in this guide; for introductory, refer to the product's documentation for any differences).

COVERED IN THIS GUIDE

- This guide assumes understanding of basic database concepts.
- SQL started out SQL as a NQL (Structured English Query Language) in the 1970s:
 - It was a standard language for query databases.
 - This has changed very little in its scope and purpose over that years.
- The American National Standards Institute (ANSI) designed a standard that allowed database vendors better interoperability between variations and made it easier to learn and migrate between database vendors:
 - Their first standard was released in 1986, and was updated in 1992, and 1999.
- One of SQL-92's big changes was the introduction of conformance levels:
 - They were, from simplest to the most complete, implementations of the standard: Entry, Intermediate, and Full.
 - Each level encompassed all of the preceding levels and added new capabilities.
 - To claim ANSI compliance, the product had to at least support the Entry level.
- SQL-99 added, among other things, object-oriented-database:
 - It also changed Entry-level conformance to Core SQL-99.
 - Also changed the other 2 levels to 9 sets of additional features.
 - Any database that meets the core spec, and at least 3 additional features set in Enhanced SQL-999 compliant.

CONVENTIONS USED

For easier syntax, simpler to write, the following notations are used in syntax descriptions:

Notation	Example	Meaning
ALL-CAPS	SELECT	A SQL keyword; type this term exactly as shown.
bold ALL-CAPS	SELECT	Statements and options that are part of the ANSI standard.
italicized text	<i>Database_name</i>	Replace the italic text with the text described in <i>Tables</i> or <i>Database_name</i> with <i>MyDB</i> .
{} []	ORDER BY <i>Field_Name</i>	Optional syntax; the command will work without specifying this parameter; do not type {}.
{Options [...-n]}	ORDER BY <i>Field_Name1</i> , <i>Field_Name2</i>	Multiple parameters may be specified, separated by commas; in some cases multiple optional parameters may be specified, as noted in the use of square brackets; do not type {}; in this example, the first must not be blank, and the value < 1000.
{Options [...-n]}	SELECT <i>Field</i> , <i>Field</i> , <i>Field</i> < 1000	Multiple parameters may be specified, separated by commas; in some cases multiple optional parameters may be specified, as noted in the use of square brackets; do not type {}; in this example, the field must not be blank, and the value < 1000.
{}	FROM <i>Table</i>	Parameters (or 1 of these if multiple options are given) must be specified; in this example, the FROM clause must be specified in a SELECT statement.
{}	NULL NOT NULL	Only 1 of the options listed may be chosen; in this case NULL, or NOT NULL.
{} ()	{} ()	Entered the desired number in parentheses.
Expression	<i>Field_Name</i> or 1000 <i>Field_Name</i>	A field, variable, or combination of fields and/or variables separated by operators or a function involving fields and/or variables.
Parameter	={Parameter}	Definition of parameter referenced elsewhere.

*Note that not all statements or all possible options for every statement will be covered in this guide.
