Intelligence for Arrhythmia Detection and Prediction Evangelos Oikonomou,Polydoros Kampaktsis ,Alexios Antonopoulos,Panteleimon Pantelidis,2025-12-03 Artificial Intelligence AI for arrhythmia detection and prediction represents an emerging field within cardiovascular medicine Despite notable advancements current efforts often fall short in effectively screening and detecting arrhythmias particularly in real time and predictive contexts The proliferation of smartwatches and wearable devices has resulted in vast amounts of data that require precise and efficient processing However the ability to anticipate arrhythmic events before their occurrence remains an elusive goal Recent studies have demonstrated the potential of AI and Deep Learning DL algorithms in improving the accuracy of arrhythmia detection Yet there remains a significant gap in integrating these technologies seamlessly into clinical practice Addressing this gap is crucial for enhancing patient outcomes and advancing the field of cardiovascular medicine This Research Topic aims to explore the transformative potential of AI and DL in the accurate detection and prediction of arrhythmias The primary objective is to investigate how AI can be leveraged to process data from various devices such as 12 lead ECG machines Holter monitors inpatient ECG monitoring devices and wearables to detect arrhythmias before clinical manifestation Specific questions include How can AI algorithms be optimized for real time arrhythmia detection What are the most effective DL methodologies for analyzing diverse data modalities The research will also test hypotheses related to the predictive capabilities of AI in anticipating arrhythmic events To gather further insights into the boundaries of AI for arrhythmia detection and prediction we welcome articles addressing but not limited to the following themes Advanced DL AI methodologies for arrhythmia detection Innovative approaches for analyzing data from diverse modalities Integration of AI algorithms with wearable devices Predictive models for anticipating arrhythmic events Clinical trials and study protocols involving AI in arrhythmia care Systematic reviews of AI applications in cardiovascular medicine Technology and code developments for AI based arrhythmia detection We welcome Original Research Brief Research Report Clinical Trials Study Protocols Systematic Reviews and Technology and Code articles that contribute to the advancement of knowledge in this transformative area of cardiovascular medicine Together let us pave the way for a future where AI plays a pivotal role in predicting and preventing arrhythmias ultimately enhancing patient outcomes and reshaping the landscape of cardiovascular care   **Thyroid and Parathyroid Surgery: New and Emerging Concepts** Angela Pezzolla,Antonio Ambrosi ,Giovanni Docimo,Rita Laforgia,2025-11-05 New technologies and knowledge completely changed the diagnosis and surgical approach to thyroid and parathyroid diseases in the last decades Actually the number of detected thyroid nodules has increased significantly thanks to the ultrasound accuracy In addition the management of hyperparathyroidism has similarly evolved with an increase of endocrine diseases Prompt recognition and treatment of thyroid and parathyroid disorders could have a beneficial impact on health outcomes and could reduce the economic and social burden associated with the treatment of advanced diseases The practice of surgery for thyroid disease has seen many advances over the past decade with most developments related to technologies focusing on

the reduction of complications Devices developed for surgical dissection with improved hemostasis and reduced heat transfer and hence collateral tissue damage are of particular interest in thyroid surgery Laryngeal nerve injury and parathyroid gland dysfunction are complications of surgery with potentially devastating consequences and hence have been an area of focus for recent technological developments Conventional thyroidectomy has been the standard of care but other innovative techniques have been pioneered such as a gasless endoscopic transaxillary thyroidectomy GTET the bilateral axillary breast approach BABA behind the ear RA facelift approach and transoral endoscopic thyroidectomy via vestibular approach TOETVA The role of a multidisciplinary team which involves endocrine surgeons endocrinologists oncologists nuclear radiologists and radiotherapists is essential to find the right management of those patients The aim of this special issue is to provide a focus on new and emerging concepts about Thyroid and Parathyroid Surgery including surgical techniques with possible complications referral centers experience oncological outcomes and multidisciplinary approaches The contributions by leading experts in this field would reach this goal especially but not limited to with state of the art reviews on minimally invasive surgery or novel approaches to thyroid and parathyroid cancer **A/V A to Z** Richard W. and their associated cognitive processes differ This research topic aims to find an answer to this call by examining the central role of MI across the lifespan with a particular focus on its importance for cognitive development skill acquisition and rehabilitation Recent advances in neuroimaging and cognitive neuroscience have provided valuable insights into the neural basis of MI and introduced new methods that could revolutionize its practical application A thorough understanding of these mechanisms will enable the development of customized approaches that consider the specific needs of the tasks and the individuals involved This clarification will allow MI to be successfully integrated into educational programs sports training and rehabilitation therapies By tailoring interventions to different populations we can transfer the principles of physical training into MI practice to optimize motor learning and rehabilitation outcomes We welcome contributions that broaden our understanding of MI at all stages of life and focus on developmental aspects performance enhancement and rehabilitation We are particularly interested in original papers review articles and interdisciplinary studies that address but are not limited to the following research subtopics Neurophysiological basis of MI at different developmental stages The contribution of MI to sport and performance enhancement The use of MI in clinical and rehabilitation settings Innovative methodological approaches to the evaluation and implementation of MI Contributions linking MI to advances in cognitive psychology neurology or Artificial Intelligence This Research Topic invites an array of contributions including but not limited to original research review papers systematic reviews with or without meta analysis and research methods all aiming to develop a holistic understanding of MI and promote its practical application in different age groups   *Education about Asia* ,1999
