Linux Rheinwerk Publishing, Inc, Michael Kofler, 2025-06-17

Master Linux installation shell scripting system tuning and server setup with clear practical guidance for all skill levels Key Features Comprehensive content spanning from installation to server configuration ensures wide applicability Detailed shell scripting sections explain core concepts for automation In-depth system and network administration guidance covers real world scenarios Book Description This guide begins with Linux fundamentals including an overview of its history distributions and installation methods Readers learn to install Linux on various hardware configurations while understanding open source licensing and partitioning The book then introduces desktop environments like GNOME and KDE showing how to navigate and customize them for productivity Building on this foundation readers develop command line proficiency mastering

terminal usage and shell scripting with Bash and Zsh. The book covers file and process management, network tools and package management, giving readers confidence to optimize and secure their systems. Later chapters dive into system administration topics such as kernel compilation, bootloader configuration and virtualization with VirtualBox and QEMU. Finally, the book focuses on server installation, secure shell configuration, web and mail server setup, and file sharing via Samba. It also addresses backup strategies, firewall setup and security enhancements with SELinux and AppArmor, preparing readers to maintain reliable, secure Linux environments in professional or personal contexts. What you will learn: Install and configure Linux on various popular distributions. Customize and operate GNOME and KDE desktop environments efficiently. Create, debug and automate tasks using Bash and Zsh shell scripts. Manage files, permissions and processes through command line tools. Set up and secure network services including SSH and Apache servers. Deploy virtual machines and maintain Linux servers with best practices. Who this book is for: This book is designed for learners eager to understand Linux deeply, from beginners to intermediate users. It is ideal for hobbyists, IT professionals and students with basic computer literacy who want to progress from installation through system configuration to advanced server and security management.

Applied Reconfigurable Computing. Architectures, Tools, and Applications Nikolaos Voros, Michael Huebner, Georgios Keramidas, Diana Goehringer, Christos Antonopoulos, Pedro C. Diniz, 2018-04-25. This book constitutes the proceedings of the 14th International Conference on Applied Reconfigurable Computing (ARC 2018) held in Santorini, Greece, in May 2018. The 29 full papers and 22 short presented in this volume were carefully reviewed and selected from 78 submissions. In addition, the volume contains 9 contributions from research projects. The papers were organized in topical sections named machine learning and neural networks, FPGA based design and CGRA optimizations, applications and surveys, fault tolerance, security and communication architectures, reconfigurable and adaptive architectures, design methods and fast prototyping, FPGA based design and applications, and special session research projects.

Framework for Real-time 3D Reconstruction by Space Carving using Graphics Hardware Christian Nitschke,2012-03-02 Diploma Thesis from the year 2006 in the subject Communications Research Studies Enquiries grade 1 University of Weimar language English abstract Reconstruction of real world scenes from a set of multiple images is a topic in Computer Vision and 3D Computer Graphics with many interesting applications There exists a powerful algorithm for shape reconstruction from arbitrary viewpoints called Space Carving However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations It is shown that the new approach

can outperform the latter by more than one magnitude The downloadable introduction has been written specifically for this offer Its contents are only a subset of the real introductory chapter of the thesis **Research Report NIFS-PROC Series**
