Smart Home Usa:

Threshold Heather Suzanne Woods, 2024-05-15 Smart homes are domestic spaces outfitted with networked technology made by brands like Google Facebook Amazon and Apple However Silicon Valley purveyors are not the only important actors in smart home development Appliance makers logistics companies health and wellness conglomerates insurance companies and security franchises are all betting on the smart home in an economy that puts a premium on data Together major players in the smart home space have successfully attracted the attention and pocketbooks of millions of households by touting the virtues of ambient networked technologies as an upgrade to modern domestic life If industry predictions hold nearly half of American houses will be smart by 2024 Yet what it means to be smart is still unsettled *Threshold* asks and answers the question How do smart homes communicate cultural values about the role of technology in the 21st century Answering this question is time sensitive as the coming years will determine how smart homes are configured who has access to them and what they mean to their owners policy makers technology companies and others invested in these domestic digital platforms The consequences of these decisions are significant because they impact both smart home residents and society at large At present much of the research on smart homes caters either to industry experts or scientists and engineers This literature often describes or evaluates the technical capacities of the smart home or focuses on user interface and design Instead Heather Woods argues we need a sustained cultural analysis of smart homes that considers the socio technical variables gender class income disparity race criminal justice the housing market and the future of both labor and domesticity that give the smart home meaning *Threshold* takes up this challenge from a rhetorical perspective arguing that smart homes are lived material embodiments of the digital cultures in which they are imagined built and used Those considerations more often than not are relegated to secondary considerations when in truth they are the most pervasive and consequential factors affecting anyone participating in a smart home ecosystem Woods argues that smart homes are spatial manifestations of a phenomenon called living in digitality a cultural condition whereby users engage with technology at every moment of every day Using extensive fieldwork at smart homes throughout the USA Woods traces how smart homes urge ubiquitous computing as a normalized daily practice readying domestic spaces and their occupants for an increasingly transactional digital future that is largely controlled by corporate interests *Threshold* advances knowledge in three ways by 1 Offering definitional tools for identifying and evaluating immersive technologies including but not limited to the smart home 2 Identifying three distinct configurations of the smart home according to their domestic and technological functions 3 Demonstrating the productive capacity of smart homes and smart devices to influence social life The book highlights the rhetorical force of smart domesticity for rhetorical scholars digital humanists political scientists critical theorists policy makers and residents or prospective residents of smart homes Ultimately *Threshold* serves as a toolkit for recognizing and responding to the persistent encroachment of digital technologies in all parts of our lives Ecological Design of Smart Home Networks N.

then that In my home I incorporated a combination of these things selecting what I felt was the best product for each task some overlap The technology is futuristic and frankly cool but it required me to change the way I interacted with the world around me Once my smart home was set up the way I wanted I had to be mindful that it was there to help me albeit not necessarily on my terms I had to learn how to interact with my virtual assistants That journey is still unfolding and I expect both my smart home and IoT to keep expanding and improving as we add more things This book started simply as the notes I kept during my recent personal experience with selecting and setting up smart home devices for a new house The scope of this book is broad because the technology isn't just one smart home device it's all around us in our day to day lives For that reason I've included a lot of information on smart applications mobile operating systems cloud services and how they overlap and share data While researching the project my husband and I read a plethora of reviews from folks like us real people that is Some reviews were admittedly more insightful than others but we gained valuable insights into what to avoid what questions to ask and we found some great ideas If you are a DIY type or just want a general idea of what is going on with smart homes this book will show you a bit of what is possible By the end of this book indeed I hope that you will be comfortable in the Internet of Things or IoT world of connected devices virtual assistants skills connected apps or IFTTT applets Chapter 3 outlines the basics of the technology behind IoT and then Chapter 4 discusses ideas for setting up a smart home Chapter 5 moves beyond smart home devices and covers apps cloud services and sharing data Smart home solutions are discussed in Chapters 6-9 Chapters 10 and 11 deal with virtual assistants like Siri Alexa or Google Assistant Smart apps are discussed in Chapter 12 As you go through the chapters you will learn the terminology and what really matters when buying equipment In case you're like me and like to skip around as topics interest you the Table of Contents is organized so you can quickly find what you're looking for Now let's get started and show you how to Select good equipment and plan for future growth Set up and connect everything Integrate apps and systems Maintain your smart home
