**Temporal, Spatial, and Spatio-Temporal Data Mining** John F. Roddick, Kathleen Hornsby, 2014-01-15 *Temporal Data Mining* Theophano Mitsa, 2010-03-10 From basic data mining concepts to state of the art advances this book covers the theory of the subject as well as its application in a variety of fields It discusses the incorporation of temporality in databases as well as temporal data representation similarity computation data classification clustering pattern discovery and prediction The book also explores the use of temporal data mining in medicine and biomedical informatics business and industrial applications web usage mining and spatiotemporal data mining Along with various state of the art algorithms each chapter includes detailed references and short descriptions of relevant algorithms and techniques described in other references

**Temporal, Spatial, and Spatio-Temporal Data Mining** John F. Roddick, Kathleen Hornsby, 2001-02-28 This book constitutes the thoroughly refereed post proceedings of the First International Workshop on Temporal Spatial and Spatio Temporal Data Mining TSDM 2000 held in Lyon France in September 2000 during the PKDD 2000 conference The ten revised full papers presented are complemented by an introductory workshop report and an updated bibliography for the emerging new field this bibliography is organized in nine topical chapters and lists more than 150 entries All in all the volume reflects the state of the art in the area and sets the scene for future R D activities *Temporal Data Mining via Unsupervised Ensemble Learning* Yun Yang, 2016-11-15 Temporal Data Mining via Unsupervised Ensemble Learning provides the principle knowledge of temporal data mining in association with unsupervised ensemble learning and the fundamental problems of temporal data clustering from different perspectives By providing three proposed ensemble approaches of temporal data clustering this book presents a practical focus of fundamental knowledge and techniques along with a rich blend of theory and practice Furthermore the book includes illustrations of the proposed approaches based on data and simulation experiments to demonstrate all methodologies and is a guide to the proper usage of these methods As there is nothing universal that can solve all problems it is important to understand the characteristics of both clustering algorithms and the target temporal data so the correct approach can be selected for a given clustering problem Scientists researchers and data analysts working with machine learning and data mining will benefit from this innovative book as will undergraduate and graduate students following courses in computer science engineering and statistics Includes fundamental concepts and knowledge covering all key tasks and techniques of temporal data mining i e temporal data representations similarity measure and mining tasks Concentrates on temporal data clustering tasks from different perspectives including major algorithms from clustering algorithms and ensemble learning approaches Presents a rich blend of theory and practice addressing seminal research ideas and looking at the technology from a practical point of view Temporal Data Mining Xiao Fu, Dr Supervisor Petrounias, University of Manchester.
