The Theory of Environmental Policy William J. Baumol, Wallace E. Oates, 1988-02-26 In this book Professors Baumol and Oates provide a rigorous and comprehensive analysis of the economic theory of environmental policy They present a formal theoretical treatment of those factors influencing the quality of life By covering both the theory of externalities and its application to environmental policy the authors have retained the basic structure and organization of the first edition which has become a standard reference in the field In this edition however they have updated their analysis to incorporate recent research in environmental economics

Does Environmental Policy Work? David E. Ervin, James R. Kahn, Marie Leigh Livingston, 2003 At the beginning of the twenty first century a growing struggle has arisen between those who would like to repeal existing environmental policy and those who would like to see greater environmental protection On both sides however many of the arguments remain grounded in ideology This book attempts to moderate the conflict by exploring methods to accurately measure and assess the effectiveness of environmental policies Does Environmental Policy Work examines our ability to assess the impact of environmental policies on the environment in particular and on social welfare in general The distinguished authors explore the theory of assessment concentrating primarily on a conceptual examination of the evaluation process They extend existing tools and identify alternative indicators and methods of appraisal The focus then shifts to the use of these tools in real world policy situations by applying them to a series of case studies from Africa North America South America Europe and Asia Although the authors base their assessment predominantly on economic efficiency they also pay due regard to other interdisciplinary approaches and decision making criteria This comprehensive exploration of the theory and practice of environmental assessment will be of great interest to scholars of environmental economics ecological economics and environmental science The book will also provide guidance and direction for practitioners in the fields of environmental policy and management on how to effectively measure the outcomes of environmental policies

William J. Baumol, Wallace E. Oates, 1975 **The Theory and Practice of Command and Control in Environmental Policy** Peter Berck, 2018-01-12 This title was first published in 2003 Economists have had increasing success in arguing the merits of market based approaches to environmental problems By making polluting expensive market

based approaches provide polluters with incentives to clean up rather than mandates to stop polluting. These approaches include pollution taxes, transferable emissions permits, and subsidies for pollution abatement. The purpose of this volume is to explore the situations where Command and Control (CAC) may not be all bad and in fact might even have some advantages over market-based instruments (MBI).

The Economic Theory of Environmental Policy in a Federal System John B. Braden, S. Proost, 1997. The complexity of a multi-layered system of government yields a wealth of issues concerning environmental policy making. This important book presents new original work on the problems that arise from the existence of more than one level of government and discusses the responsibility of federal, state, and local government policy making. This theme of government responsibility for environmental regulation is expanded to consider the coordination of environmental policy across different levels of government. This is directly related to the question of which level of government should bear the costs of implementing environmental policy if agreement can be reached between various levels of government. Furthermore, the contributors discuss whether the policy targets for environmental quality should be uniform or regionally differentiated. They conclude that there is a role for both a federal government and for regional coordination in the design and application of environmental policies. Moreover, that economic integration through a federal system can result in better and more efficient environmental regulation. *The Economic Theory of Environmental Policy in a Federal System* will be an invaluable resource for academics, policymakers, and government officials.

Environmental Economics Hans Wiesmeth, 2011-10-20. This text provides an analysis and investigation of the most essential areas of environmental theory and policy, including international environmental problems. The approach is based on standard theoretical tools in particular equilibrium analysis and aims to demonstrate how economic principles can help to understand environmental issues and guide policymakers. Current topics including climate change, overfishing, and integrated approaches to environmental policies are carefully analyzed in this framework, and a multitude of practical examples from various parts of the world is presented.

Environmental Economics Alfred Endres, 2011. How can we design environmental policy that achieves ambitious ecological goals without

burdening society with excessive costs How can effective international agreements for example on global warming be designed This textbook discusses issues such as these in an intelligible manner for students The book uses little mathematical analysis relying on verbal and graphical analysis Handbook of Strategic Environmental Assessment Barry Sadler, Jiri Dusik, Thomas Fischer, Maria Partidario, Rob Verheem, Ralf Aschemann, 2012-09-10 This authoritative handbook surveys the full breadth and depth of SEA bringing together a range of international perspectives and insights on the theoretical methodological and institutional dimensions and practical issues of the field It then subjects this conventional wisdom to a critical reappraisal looks at the vast lessons of experience and offers new ideas and interpretations as to where the field is going The volume is organized into six major sections beginning with an introduction and overview of the development of the field and a framework for evaluating SEA good practice Part I comprises a review of SEA frameworks in leading countries Australia Canada New Zealand and the USA the European Union and developing regions Africa Asia Latin America and Newly Independent States Part II reviews SEA practice in several major sectors energy minerals transport water development assistance and coastal zone management Part III addresses the linkages between SEA and other comparable tools such as spatial planning and environmental management Part IV probes key cross cutting issues in SEA including how to address cumulative and trans boundary effects Part V identifies ways and means of SEA process and capacity development focusing on how to improve and upgrade the theory and practice of the field Part VI examines the shift from conventional SEA towards more integrative approaches drawing on experience and examples from a number of countries Published with IAIA *Environmental Policy Processes Surrounding South Africa's Plastic Bags Regulations: Tensions, Debates and Responses in Waste Product Regulation* Godwell Nhamo, 2008-01-31 This study was conducted in South Africa South Africa is the first country within the Southern African Development Community to have regulated plastic shopping bags waste through the imposition of both a standard on thickness and a levy Given this scenario the Plastic Bags Regulations present an illustrative case for researching complexity uncertainty and controversies surrounding a new trend in environmental policy making namely waste product regulation The thesis focuses on understanding and investigating tensions debates and responses emerging from the policy process as actors and actor networks put not only the Plastic Bags Regulations into circulation as focal actant token but also other actants and actant networks as well To this end a research question that addressed environmental policies tensions debates and responses that informed the development of South Africa's Plastic Bags Regulations was spelt out The research objectives included the need to 1 analyse selected international environmental policy processes surrounding plastic shopping bags litter and waste regulation and how these influenced developments in South Africa 2 identify actors actants and actor actant networks that shaped and were being transformed by South Africa's Plastic Bags Regulations and explain the tensions debates and responses arising in the policy processes 3 identify environmental policy outputs and assess outcomes emerging from the formulation and implementation of South

Africa's Plastic Bags Regulations and 4 establish patterns in environmental policy process reforms around South Africa's Plastic Bags Regulations. The language of actors, human actants, non-human and actor-actant networks brings to the fore the aspects of processes and relationships that exist around them. As such, insights from the actor-actant network theory (AANT) were drawn upon to inform the research. AANT enquiry framework collapses binaries such as nature/society, art/science, structure/agency and global/local, historically associated with a particular type of social theory. AANT also denies that purely technical/scientific or social relations are possible; the notion of quasi-objects or tokens. Data sets were generated following the Plastic Bags Regulations as token actant with time frames ranging from prior to, during and after the formulation of the regulations. Similarly, data analysis drew insights from AANT's four moments of translation, namely: problematisation, interessement, enrolment and mobilisation, with the intervention theory providing an evaluative perspective that complemented AANT. The findings were that after the promulgation of the first draft of the Plastic Bags Regulations in May 2000, tensions emerged around the nature of regulation: whether command and control preferred by government or self-regulation preferred by industry and labour. In this regard, the latter group raised concerns about jobs, income and equipment loss, as well as the need to have a holistic approach to waste management rather than targeting a single product at a time, whilst the former maintained that this would not be so. As such, education, awareness and stringent anti-litter penalties were proposed by industry and labour as sustainable responses to the problem of plastic shopping bags waste rather than regulation. These debates continued and resulted in minor amendments to the original regulations as finalised by Government in May 2002. However, industry and labour continued lobbying government, resulting in the conclusion of the Plastic Bags Agreement in September 2002 and the ultimate repulsion of the May 2002 regulations in May 2003. As revealed by this research, these responses led to broader social responses and further tensions as demand for plastic shopping bags went down by about 80% although an estimated 1000 jobs were lost and a number of companies lost equipment and business with some closing down following the implementation of.
