Multiprocessor Database Systems Shahram Ghandeharizadeh,1990 Abstract In shared nothing multiprocessor database
machines relations are horizontally declustered across multiple processors in order to obtain a lower response time and a
higher throughput from the system Several alternative strategies exist for horizontally declustering a relation However the
performance tradeoffs of these declustering strategies with respect to the different storage and access structures have not
been previously examined Thus a database administrator for such a system has no choice but to guess how many processors
a relation should be clustered across and what declustering strategy is most appropriate **Venture** ,1984-07 *Teradata*
