Features contributions from researchers academics and professionals from a broad perspective **Language Processing
with Perl and Prolog** Pierre M. Nugues, 2014-08-06 The areas of natural language processing and computational linguistics
have continued to grow in recent years driven by the demand to automatically process text and spoken data With the
processing power and techniques now available research is scaling up from lab prototypes to real world proven applications
This book teaches the principles of natural language processing first covering practical linguistics issues such as encoding
and annotation schemes defining words tokens and parts of speech and morphology as well as key concepts in machine
learning such as entropy regression and classification which are used throughout the book It then details the language
processing functions involved including part of speech tagging using rules and stochastic techniques using Prolog to write
phase structure grammars syntactic formalisms and parsing techniques semantics predicate logic and lexical semantics and
analysis of discourse and applications in dialogue systems A key feature of the book is the author's hands on approach
throughout with sample code in Prolog and Perl extensive exercises and a detailed introduction to Prolog The reader is
supported with a companion website that contains teaching slides programs and additional material The second edition is a
complete revision of the techniques exposed in the book to reflect advances in the field the author redesigned or updated all
the chapters added two new ones and considerably expanded the sections on machine learning techniques
