**Generative AI Tools** Jochen Kuhn, Stefan Küchemann, Knut Neumann, Martina Rau, 2025-02-17

In the past ten years, applications of generative artificial intelligence (GAI) have found rapidly growing use in medicine, science, and daily life. Large language models (LLMs) have opened up new avenues, in particular for education. LLMs have been used to create interactive educational content for students, stimulate their curiosity, generate code explanations, and develop assessment questions. Additionally, LLMs have been applied for language practice, anxiety alleviation, and feedback provision. In higher education, LLMs have shown potential for assisting in medical exam preparation and clinical decision making. In school education, LLMs can help teachers with automated evaluation of student responses and respective adaptive feedback. More recently, LLM-based applications such as chatGPT have been used to generate teaching materials or assessment tasks across different subjects. The field's understanding of the effects of the use of LLM-based applications in classroom teaching, however, is still in its infancy. GAI tools may help solving a range of tasks in education, in particular with respect to teachers and students, and teachers' efforts to generate content. However, it is critical that teachers and students do not overly rely on GAI-generated

solutions but instead critically assess each solution Students should furthermore not use GAI tools to avoid investing relevant mental effort to create mental models or more broadly build up competencies *Empowering Digital Education with ChatGPT* Mohamed Lahby,2024-11-12 Recently there has been a significant increase in the development and interest in applying generative AI across various domains including education The emergence of large language models LLMs such as the ChatGPT tool fueled by advancements in generative AI is profoundly reshaping education The use of the ChatGPT tool offers personalized support improves accessibility and introduces innovative methods for students and educators to engage with information and learning materials Furthermore ChatGPT facilitates a wide range of language learning services including language instruction speech recognition pronunciation feedback and immersive virtual simulations for hands on learning experiences This book explores the transformative potential of the ChatGPT tool within education shedding light on the opportunities that arise through the integration of the ChatGPT tool into various aspects of the learning process It serves as a platform for the community to share cutting edge research ideas concerning the use of the ChatGPT tool in digital education Readers will discover how the ChatGPT tool can enhance student engagement foster personalized learning experiences facilitate intelligent tutoring systems support virtual classroom interactions and revolutionize assessment and feedback mechanisms

**Impact Evaluation using the Translational Science Benefits Model Framework in the National Center for Advancing Translational Science Clinical and Translational Science Award Program** Pamela Davidson,Joe Hunt,Douglas Luke,Anna La Manna,2025-11-10 Knowledge translation is a critical activity that helps transform research results into new practices and policies that benefit health and society Similar to other countries the US has initiated a translational science research program in clinical research and public health In the US the National Institutes of Health NIH and the National Center for Advancing Translational Science NCATS have addressed this challenge through the Clinical and Translational Science Award CTSA Program The charge of the CTSA Program is to transform the organization and infrastructure of the academic research enterprise to facilitate the movement of discoveries from clinical science to the bedside and community Documenting the results of these efforts is a necessary component to assess outcomes health and social impacts and support continuous improvement In the CTSA program the 60 CTSA hubs primarily located at academic health sciences research institutes across the nation are just starting to systematically measure and evaluate the impacts of their activities One example of tracking and assessing impact is the Translational Science Benefits Model TSBM introduced in 2018 which is one of the first frameworks for standardized documentation and dissemination of data on outcomes and impacts of translational science and translational research Additionally this Research Topic will explore and compare models and measurement tools used to assess the impact of translational science research internationally This Research Topic will highlight the use of the Translational Science Benefits Model TSBM and other impact evaluation models applied by investigators across a wide spectrum of medical and public health areas including CTSA hubs community international

partners and others Although translational science is still in its infancy much work is being conducted nationally and internationally to integrate impact evaluation on medical and public health practice the economy and health policy In terms of a prevention orientation the TSBM can be used to track program development implementation and impacts on preventing and addressing disease The TSBM framework is also useful for changing the culture of academic research settings to place more value on health and social impacts as well as providing training opportunities for early career investigators on how to design for impact at the beginning of programmatic research The TSBM framework has been successfully deployed within the context of the CTSA Program Sharing successful applications of the TSBM across a wider range of research dissemination and implementation is needed to fully understand its strengths and limitations to refine and improve it further and to study its application in a variety of contexts Hence this model has the potential to become a standard for systematic comparable reporting of translational science impact on health and societal benefits We aim to identify similar impact models deployed within international research settings The scope of this Research Topic includes advances in data collection methodology analysis and results from the application of the TSBM in the CTSA Program as well as with community and international partners Specific themes might include but are not limited to Development and use of quantitative metrics and qualitative measures using the TSBM TSBM as an educational intervention to train junior investigators on impact in translational science Longitudinal evaluation to show potential and demonstrated impact in specific research areas e g software development public health policy change Integrating social determinants of health disparities and equity in impact evaluation Application of TSBM results to improve operations and translational science in core areas of CTSA hubs TSBM is used to deliver new programs applications and community engagement to build cases in the 4 domains Examples of TSBM used to track research findings into public health practice Examples of international application of the TSBM and other impact models
