*Complying with the CFC Prohibitions of the Clean Air Act* Edward G. Hauprich, Theodore A. Kluga, David S. Harlow, 1994

Air Conditioning and Refrigeration Engineering Frank Kreith, Shan K. Wang, Paul Norton, 2018-04-20 An air conditioning system consists of components and equipment arranged in sequential order to control and maintain an indoor environment. The goal is to provide a healthy and comfortable climate with acceptable air quality while being energy efficient and cost effective. Air Conditioning and Refrigeration Engineering covers all types of systems from institutional and commercial to residential. The book supplies the basics of design from selecting the optimum system and equipment to preparing the drawings and specifications. It discusses the four phases of preparing a project: gathering information, developing alternatives, evaluating alternatives, and selling the best solution. In addition, the author breaks down the responsibilities of the engineer, design documents, computer-aided design, and government codes and standards. Air Conditioning and Refrigeration Engineering provides you with an easy reference to all aspects of the topic. This resource addresses the most current areas of interest such as computer-aided design and drafting, desiccant air conditioning, and energy conservation. It is a thorough and convenient guide to air conditioning and refrigeration engineering.

**Refrigerants** Katharine B. Miller, 1995 The book includes worksheets and example forms that will be immediately useful in refrigerant management activities. It also includes answers to the most frequently asked questions on how refrigerant CFC users can meet the requirements of the current regulations and stay in business. *The CRC Handbook of Mechanical Engineering* D. Yogi Goswami, 2004-09-29 The second edition of this standard-setting handbook provides an all-encompassing reference for the practicing engineer in industry, government, and academia with relevant background and up-to-date information on the most important topics of modern mechanical engineering. These topics include modern manufacturing and design, robotics, computer engineering, environmental engineering, economics, patent law, and communication information systems. The final chapter and appendix provide information regarding physical properties and mathematical and computational methods. New topics include nanotechnology, MEMS, electronic packaging, global climate change, electric and hybrid vehicles, and bioengineering.
