

## Student Council Secretary Speech

I really enjoy participating in student council and that's why I decided to run for secretary. As most of you know my name is Carrie Cassarello and let me tell you why you should vote for me.

I am dedicated to student council. I have attended all the meetings this year. I also contribute time and effort to student council. In my free time at school (in between periods or during my lunch), I made power points for the class cup events, updating my class on what was going on and I kept them involved. The secretary has to keep a record of the minutes during meetings, which means they have to write or take notes on what we discussed in the meeting. I am very organized and I would make sure not to lose any papers or any work I did.

I also consider myself a team player. I play on many sports teams and contribute in many ways. I really enjoy working with other people, it's good to give and receive ideas. Together we can come up with great ideas to help the school and community. Student council is a great way to be involved, it is a great way to get to know and work with new people.

I have been a representative for 2 years, so I have experience and am ready for any challenge. I am ready to work. I am ready to help our community. I would really enjoy being our student council secretary.

I believe I would be the perfect candidate because I am dedicated, I am organized, I am trustworthy and because I am a hard worker.

**And don't forget**

**"Take note, the right vote is Carrie Cassarello for Secretary"**

**Thank you!**

Bringing together renowned scholars in literacy education this volume offers the first comprehensive account of the evolution and future of multiliteracies pedagogy This groundbreaking collection examines the rich contributions of the New London Group NLG an international gathering of noted scholars who met in 1996 and influenced the direction of literacy scholarship for decades to come With a focus on design and multimodality as key concerns in literacy pedagogy these ideas have become even more salient as literacy has become intertwined with digital technologies The essays in this book not only provide an overview of the fundamental ideas of NLG and their importance across literacy communications and media studies but also explore how these concepts have been adapted by today's educators to better prepare students for a rapidly changing globalized world Contributors include Bill Cope James Paul Gee Carey Jewitt Mary Kalantzis Gunther Kress Mary B McVee Sarah Michaels Rebecca Rogers Jennifer Rowsell and Karen E Wohlwend I've read a lot about the importance of new literacies digital literacies and multi literacies and now there is finally a book that moves this whole cluster into the world of curriculum and pedagogy Bravo P David Pearson University of California Berkeley This book warrants deep engagement by teachers teacher educators researchers and all who are concerned with schooling and social justice in the ever changing world of the 21st century Len Unsworth Learning Sciences Institute Australia This collection showcases authors at the leading edge of multiliteracies research and scholarship It provides a fascinating and accessible state of the art assessment of a major approach to understanding literacy practices in the digital era Michele Knobel

Montclair State University **Deep Learning Techniques Applied to Affective Computing** Zhen Cui, Wenming

Zheng, 2023-06-14 Affective computing refers to computing that relates to or influences emotions The goal of affective computing is to bridge the gap between humans and machines and ultimately endow machines with emotional intelligence for improving natural human machine interaction In the context of human robot interaction HRI it is hoped that robots can be endowed with human like capabilities of observation interpretation and emotional expression The research on

affective computing has recently achieved extensive progress with many fields contributing including neuroscience psychology education medicine behavior sociology and computer science Current research in affective computing concentrates on estimating human emotions through different forms of signals such as speech face text EEG fMRI and many others In neuroscience the neural mechanisms of emotion are explored by combining neuroscience with the psychological study of personality emotion and mood In psychology and philosophy emotion typically includes a subjective conscious experience characterized primarily by psychophysiological expressions biological reactions and mental states The multi disciplinary features of understanding emotion result in the fact that inferring the emotion of humans is definitely difficult As a result a multi disciplinary approach is required to facilitate the development of affective computing One of the challenging problems in affective computing is the affective gap i e the inconsistency between the extracted feature representations and subjective emotions To bridge the affective gap various hand crafted features have been widely employed to characterize subjective emotions However these hand crafted features are usually low level and they may hence not be discriminative enough to depict subjective emotions To address this issue the recently emerged deep learning also called deep neural networks techniques provide a possible solution Due to the used multi layer network structure deep learning techniques are capable of learning high level contributing features from a large dataset and have exhibited excellent performance in multiple application domains such as computer vision signal processing natural language processing human computer interaction and so on The goal of this Research Topic is to gather novel contributions on deep learning techniques applied to affective computing across the diverse fields of psychology machine learning neuroscience education behavior sociology and computer science to converge with those active in other research areas such as speech emotion recognition facial expression recognition Electroencephalogram EEG based emotion estimation human physiological signal heart rate estimation affective human robot interaction multimodal affective computing etc We welcome researchers to contribute their original papers as well as review articles to provide works regarding the neural approach from computation to affective computing systems This Research Topic aims to bring together research including but not limited to Deep learning architectures and algorithms for affective computing tasks such as emotion recognition from speech face text EEG fMRI and many others Explainability of deep Learning algorithms for affective computing Multi task learning techniques for emotion personality and depression detection etc Novel datasets for affective computing Applications of affective computing in robots such as emotion aware human robot interaction and social robots etc

### *Waveform Analysis of Sound* Mikio Tohyama, 2015-01-10

What is this sound What does that sound indicate These are two questions frequently heard in daily conversation Sound results from the vibrations of

elastic media and in daily life provides informative signals of events happening in the surrounding environment. In interpreting auditory sensations the human ear seems particularly good at extracting the signal signatures from sound waves. Although exploring auditory processing schemes may be beyond our capabilities source signature analysis is a very attractive area in which signal processing schemes can be developed using mathematical expressions. This book is inspired by such processing schemes and is oriented to signature analysis of waveforms. Most of the examples in the book are taken from data of sound and vibrations however the methods and theories are mostly formulated using mathematical expressions rather than by acoustical interpretation. This book might therefore be attractive and informative for scientists engineers researchers and graduate students who are interested in the mathematical representation of signals and the applications of Fourier analysis. The book can be described as being practically self contained but does assume readers are familiar with introductory topics in discrete signal processing as in the discrete Fourier transform. Hence this book might be also usable as a textbook in graduate courses in applied mathematics on topics such as complex functions. Almost all scientific phenomena are sensed as waves propagating in some space. Over the years waveform analysis has therefore been one of the resilient academic areas of study and still is seen as fertile ground for development. In particular waveform analysis based on the theory of linear systems would be a good example where a physical interpretation can be given to the mathematical theory of complex functions in terms of magnitude angle poles and zeros of complex functions. For readers who are interested in the physical aspects of sound and vibration data or elementary formulation of wave equations and their solutions the book *Sound and Signals* by M Tohyama Springer 2011 is recommended. It can serve as a complementary companion to this present volume or independently as a good reference.

*Augmentation of Brain Function: Facts, Fiction and Controversy* Mikhail Lebedev, Ioan Opris, Manuel F. Casanova, 2018-09-14 Volume I entitled *Augmentation of Brain Functions* Brain Machine Interfaces is a collection of articles on neuroprosthetic technologies that utilize brain machine interfaces BMIs. BMIs strive to augment the brain by linking neural activity recorded invasively or noninvasively to external devices such as arm prostheses exoskeletons that enable bipedal walking means of communication and technologies that augment attention. In addition to many practical applications BMIs provide useful research tools for basic science. Several articles cover challenges and controversies in this rapidly developing field such as ways to improve information transfer rate. BMIs can be applied to the awake state of the brain and to the sleep state as well. BMIs can augment action planning and decision making. Importantly BMI operations evoke brain plasticity which can have long lasting effects. Advanced neural decoding algorithms that utilize optimal feedback controllers are key to the BMI performance. BMI approach can be combined with the other augmentation methods such systems are called hybrid BMIs. Overall it appears that BMI will lead to many powerful and practical brain augmenting technologies in the future.
