The Regional Economics of Technological Transformations Roberta Capello,Camilla Lenzi,2021-08-30 The Regional Economics of Technological Transformations provides a comprehensive overview of 4 0 technological transformations in Europe and their socio economic impact with a particular emphasis on the regional dimension of the phenomena The authors employ extensive original data and robust quantitative methods to analyse technological change in all regions of the 27 EU countries plus the UK and shed light on this trend for Europe and beyond Structured in four parts the book first looks at conceptual definitions empirical measurements and expected impacts on both the economic performance GDP and productivity growth and the labour market and then moves on to analyse where 4 0 technological transformation actually takes place in Europe and the reasons for this Next it offers original empirical evidence on the impacts of the different transformations and of their intertwined effects on both the economy and the society Finally the book explores the policy implications of this technological transformation This book will be valuable reading for advanced students researchers and policymakers working across regional economics industrial economics and innovation policy It will be of primary interest to regional scientists interested in the field who may enjoy the conceptual and empirical solutions to the study of a very complex timely and still largely unexplored theme Sociologists engineers and political economists can benefit from the book s analysis noting the urgency of the development of new ethical rules governing the new digital and labour markets Finally the book may appeal to policymakers interested in opportunities to increase regional competitiveness and sustainability goals through the advent of 4 0 technologies

Cataloging Policy and Support Office,2004 *Library of Congress Subject Headings* Library of Congress,2010 **Exact Methods for Nonlinear PDEs** Andrei D. Polyanin,2025-08-13 Exact Methods for Nonlinear PDEs describes effective analytical methods for finding exact solutions to nonlinear differential equations of mathematical physics and other partial differential equations and also demonstrates the practical applications of these methods It covers the methods of generalized separation of variables methods of functional separation of variables the classical method of symmetry reductions the direct method of symmetry reductions the method of weak symmetry reductions and the method of differential constraints The book presents several simple methods for finding exact solutions to nonlinear partial differential equations PDEs These methods do not require specialized knowledge and aim to minimize intermediate calculations For the first time it discusses the application of nonrigorous intuitive reasoning in deriving exact solutions to nonlinear PDEs Each section provides numerous examples problems and exercises to help readers develop practical skills in applying the methods The material is illustrated with equations of mass and heat transfer hydrodynamics wave theory nonlinear optics and other nonlinear equations of mathematical physics The key points that distinguish this book from others in the field include it presents many methods in a simpler and more visual format it describes a number of simple methods for constructing exact solutions to nonlinear PDEs and delay PDEs it emphasizes and details the practical use of non rigorous reasoning to derive exact solutions for nonlinear PDEs The book is intended for a diverse audience including researchers university professors engineers postgraduates and students specializing in applied mathematics theoretical physics and engineering sciences

Integrated Formal Methods

Dominique Méry,Stephan Merz,2010-10-01 Annotation This book constitutes the refereed proceedings of the 8th International Conference on Integrated Formal Methods IFM 2010 held in Nancy France in October 2010 The 20 revised full papers presented together with 3 invited papers were carefully reviewed and selected from 59 submissions The papers address the spectrum of integrated formal methods ranging from formal and semiformal notations semantics refinement verification and model transformations to type systems logics tools and case studies
