Energy is at the core of development, but in energy generation, there are severe environmental implications in many cases. This clearly affects development and causes significant challenges to sustainability. Climate change and disasters have an effect on energy infrastructures and also make significant impacts on humans in terms of both shocks and stresses. Therefore, it is extremely important to understand the linkage of energy, sustainability, and resilience. Asia is a hotspot of climate change and disasters, suffering from severe damages to the energy infrastructure of the countries there. At the same time, being a core of world development trajectories, Asia produces and consumes more energy in different sectors than any other part of the world. Also, however, Asia serves as a core region of innovative ideas in energy and related sectors.
