GPU Powered VDI Jan Meier, 2018-06-21 User demands on the systems have risen continuously in recent years In addition more and more software products especially the operating systems Windows themselves no longer calculate the graphic representation on the CPU Central Processing Unit Instead they calculate it on the GPU Graphics Processing Unit optimized for this purpose If no GPU is available the calculation continues to be performed on the CPU Especially when using virtual desktops i.e. desktops that are provided in the data center the lack of GPU is often a clear disadvantage compared to classic PCs In addition the load on the corresponding servers is getting significantly higher and the number of users per physical server decreases The costs per user increase The industry recognized this disadvantage several years ago and introduced the GPU Pass through technology A physical graphics card is assigned to a virtual machine This can then use the full power of the graphics card but each virtual machine requires its own graphics card The costs per user increase To resolve this issue NVIDIA has released GRID technology This makes it possible for several virtual machines to share a graphics card but still maintain full performance similar to what already happens in all virtual environments with the CPU You will learn what to consider when planning a vGPU environment and learn step by step how to deploy it with Citrix and NVIDIA This is followed by monitoring the environment and correcting known errors Contents excerpt Plan vGPU Types License Variants HDX HDX 3D Pro Do Graphics Cards License Server Virtual Delivery Agent Check GPU Monitoring NVIDIA SMIGPU Profiler Act System Load 3D Connexion Devices Troubleshooting

## **GPU Parallel Computing for Machine**

**Learning in Python** Yoshiyasu Takefuji, 2017-06-17 This book illustrates how to build a GPU parallel computer If you don't want to waste your time for building you can buy a built in GPU desktop laptop machine All you need to do is to install GPU enabled software for parallel computing Imagine that we are in the midst of a parallel computing era The GPU parallel computer is suitable for machine learning deep neural network learning For example GeForce GTX1080 Ti is a GPU board with 3584 CUDA cores Using the GeForce GTX1080 Ti the performance is roughly 20 times faster than that of an INTEL i7 quad core CPU We have benchmarked the MNIST hand written digits recognition problem 60 000 persons hand written

digits from 0 to 9 The result of MNIST benchmark for machine learning shows that GPU of a single GeForce GTX1080 Ti board takes only less than 48 seconds while the INTEL i7 quad core CPU requires 15 minutes and 42 seconds A CUDA core is most commonly referring to the single precision floating point units in an SM streaming multiprocessor A CUDA core can initiate one single precision floating point instruction per clock cycle CUDA is a parallel computing platform and application programming interface API model created by Nvidia It allows software developers and software engineers to use a CUDA enabled graphics processing unit GPU for general purpose processing The GPU parallel computer is based on SIMD single instruction multiple data computing The first GPU for neural networks was used by Kyoung Su Oh et al for image processing published in 2004 1 A minimum GPU parallel computer is composed of a CPU board and a GPU board This book contains the important issue on which CPU GPU board you should buy and also illustrates how to integrate them in a single box by considering the heat problem The power consumption of GPU is so large that we should take care of the temperature and heat from the GPU board in the single box Our goal is to have the faster parallel computer with lower power dissipation Software installation is another critical issue for machine learning in Python Two operating system examples including Ubuntu16.04 and Windows 10 system will be described This book shows how to install CUDA and cudnnlib in two operating systems Three frameworks including pytorch keras and chainer for machine learning on CUDA and cudnnlib will be introduced Matching problems between operating system Ubuntu Windows 10 library CUDA cudnnlib and machine learning framework pytorch keras chainer are discussed The paper entitled GPU and open source software play a key role for advancing deep learning was published in Science eLetter July 20 2017 <http://science/sciencemag.org/content/357/6346/16> tab e letters **GPU gems** Randima Fernando,2006
