Technology Rivalry Between the USA and China Peter C.Y. Chow, 2025-02-19 This book addresses the geopolitics and geoeconomics of technological rivalry between the world's two great powers the USA and China. It focuses on the semiconductor industry which, owing to its dual use in civilian and defence sectors, is critical to economic and national security interests. A diverse set of contributions from renowned scholars span wide-ranging topics to holistically analyze contemporary USA-China national security through a technological lens: the shifting trade and technology policy in the USA; the Chip 4 alliance as an industrial cartel; technology sanctions and the voice of high-tech industry in the USA; the race for digital sovereignty in the Gulf region and in Africa; Japan's grand strategy vis-à-vis semiconductors; a critical assessment of China's achievement on its self-sufficiency and effort in reducing its reliance on foreign supplies; the significance and the strategy of Taiwan's semiconductor in the future as well as how Taiwan can advance its national security through its status as a powerhouse of semiconductors; Korea's semiconductor policy in response to international technology rivalry; India's pursuit of semiconductors; and a close investigation of decoupling and hostility between the two great powers. *Accelerator Programming Using Directives* Sridutt Bhalachandra, Christopher Daley, Verónica Melesse Vergara, 2022-05-14 This book constitutes the proceedings of the 8th International Workshop on Accelerator Programming Using Directives WACCPD 2021 which took place in November 2021. GPU Parallel Program Development Using CUDA Tolga Soyata, 2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple s Swift and Metal and the deep learning library cuDNN
