*Singularity Hypotheses* Amnon H. Eden,James H. Moor,Johnny H. Soraker,2013-04-30 **Superintelligence** Nick Bostrom,2014-07-03 The human brain has some capabilities that the brains of other animals lack It is to these distinctive capabilities that our species owes its dominant position Other animals have stronger muscles or sharper claws but we have cleverer brains If machine brains one day come to surpass human brains in general intelligence then this new superintelligence could become very powerful As the fate of the gorillas now depends more on us humans than on the gorillas themselves so the fate of our species then would come to depend on the actions of the machine superintelligence But we have one advantage we get to make the first move Will it be possible to construct a seed AI or otherwise to engineer initial conditions so as to make an intelligence explosion survivable How could one achieve a controlled detonation To get closer to an answer to this question we must make our way through a fascinating landscape of topics and considerations Read the book and learn about oracles genies singletons about boxing methods tripwires and mind crime about humanity's cosmic endowment and differential technological development indirect normativity instrumental convergence whole brain emulation and technology couplings Malthusian economics and dystopian evolution artificial intelligence and biological cognitive enhancement and collective intelligence This profoundly ambitious and original book picks its way carefully through a vast

tract of forbiddingly difficult intellectual terrain Yet the writing is so lucid that it somehow makes it all seem easy After an utterly engrossing journey that takes us to the frontiers of thinking about the human condition and the future of intelligent life we find in Nick Bostrom's work nothing less than a reconceptualization of the essential task of our time *The Technological Singularity* Victor Callaghan, James Miller, Roman Yampolskiy, Stuart Armstrong, 2017-05-22 This volume contains a selection of authoritative essays exploring the central questions raised by the conjectured technological singularity. In informed yet jargon free contributions written by active research scientists philosophers and sociologists it goes beyond philosophical discussion to provide a detailed account of the risks that the singularity poses to human society and perhaps most usefully the possible actions that society and technologists can take to manage the journey to any singularity in a way that ensures a positive rather than a negative impact on society. The discussions provide perspectives that cover technological political and business issues. The aim is to bring clarity and rigor to the debate in a way that will inform and stimulate both experts and interested general readers Legal and Ethical Challenges of Artificial Intelligence from an International Law Perspective Themistoklis Tzimas, 2021-07-30 This book focuses on the legal regulation mainly from an international law perspective of autonomous artificial intelligence systems of their creations as well as of the interaction of human and artificial intelligence. It examines critical questions regarding both the ontology of autonomous AI systems and the legal implications what constitutes an autonomous AI system and what are its unique characteristics. How do they interact with humans. What would be the implications of combined artificial and human intelligence. It also explores potentially the most important questions what are the implications of these developments for collective security from both a state centered and a human perspective as well as for legal systems. Why is international law better positioned to make such determinations and to create a universal framework for this new type of legal personality. How can the matrix of obligations and rights of this new legal personality be construed and what would be the repercussions for the international community. In order to address these questions the book discusses cognitive aspects embedded in the framework of law offering insights based on both *de lege lata* and *de lege ferenda* perspectives Religion and Transhumanism Calvin Mercer, Tracy J. Trothen, 2014-11-17 Should technology be used to improve human faculties such as cognition and longevity. This thought provoking dialogue between transhumanism and religion examines enhancement technologies that could radically alter the human species. Transhumanism or human enhancement is an intellectual and cultural movement that advocates the use of emerging technologies to change human traits. Although they may sound like science fiction the possibilities suggested by transhumanism are very real and the questions they raise have no easy answers. If these enhancements especially major ones like the indefinite extension of healthy human life become widely available they would arguably have a more radical impact on humankind than any other development in history. This book comprises essays that explore transhumanism and the issues that surround it addressing numerous fascinating questions posed by scholars of religion from various traditions. How will

immortality or extreme longevity change our religious beliefs and practices How might pharmaceuticals enhance spiritual experiences Will post human technologies be available to all persons or will a superior post human race arise to dominate the human species The discussions are as intriguing as the future they suggest

*Social Robots* Marco Nørskov,2017-07-05

Social robotics is a cutting edge research area gathering researchers and stakeholders from various disciplines and organizations The transformational potential that these machines in the form of for example caregiving entertainment or partner robots pose to our societies and to us as individuals seems to be limited by our technical limitations and phantasy alone This collection contributes to the field of social robotics by exploring its boundaries from a philosophically informed standpoint It constructively outlines central potentials and challenges and thereby also provides a stable fundament for further research of empirical qualitative or methodological nature
