Statistical Modeling and Applications on Real-Time Problems Chandra Shekhar, Raghaw Raman Sinha, 2024-06-06 In an era dominated by mathematical and statistical models this book unravels the profound significance of these tools in decoding uncertainties within numerical observational and calculation based data From governmental institutions to private entities statistical prediction models provide a critical framework for optimal decision making offering nuanced insights into diverse realms from climate to production and beyond This book Serves as a comprehensive resource in statistical modeling methodologies and optimization techniques across various domains Features contributions from global authors the compilation comprises 10 insightful chapters each addressing critical aspects of estimation and optimization through statistical modeling Covers a spectrum of topics from non parametric goodness of fit statistics to Bayesian applications the book explores novel resampling methods advanced measures for empirical mode and transient behavior analysis in queueing systems Includes asymptotic properties of goodness of fit statistics practical applications of Bayesian Statistics modifications to the Hard EM algorithm and explicit transient probabilities Culminates with an exploration of an inventory model for perishable items integrating preservation technology and learning effects to determine the economic order quantity This book stands as a testament to global collaboration offering a rich tapestry of commendable statistical and mathematical modeling alongside real world problem solving It is poised to ignite further exploration discussion and innovation in the realms of statistical modeling and optimization Unsupervised Feature Extraction Applied to Bioinformatics Y-h.

Taguchi, 2024-08-31 This updated book proposes applications of tensor decomposition to unsupervised feature extraction and feature selection The author posits that although supervised methods including deep learning have become popular unsupervised methods have their own advantages He argues that this is the case because unsupervised methods are easy to learn since tensor decomposition is a conventional linear methodology This book starts from very basic linear algebra and reaches the cutting edge methodologies applied to difficult situations when there are many features variables while only small number of samples are available The author includes advanced descriptions about tensor decomposition including Tucker decomposition using high order singular value decomposition as well as higher order orthogonal iteration and train tensor decomposition The author concludes by showing unsupervised methods and their application to a wide range of topics

Applications of Operations Research and Management Science for Military Decision Making William P. Fox, Robert Burks, 2019-08-28 Based on many years of applied research modeling and educating future decision makers the authors have selected the critical set of mathematical modeling skills for decision analysis to include in this book The book focuses on the model formulation and modeling building skills as well as the technology to support decision analysis The authors cover many of the main techniques that have been incorporated into their three course sequence in mathematical modeling for decision
