

The Basics...

The first thing to note is that SketchyPhysics **ONLY WORKS WITH GROUPED OBJECTS.**

If you start by making a cube and grouping all the parts into one object, the object will be recognized by SP. Physics will then be applied when you press the RUN button.

There are also auto-shapes provided through a toolbar that is installed with SketchyPhysics. These shapes are already grouped and ready to use, all you have to do is draw them where you want to in your model.

Setting the STATE of the Object

After making a grouped object, there are 2 main attributes to use when creating an object to use in SP. They are accessed by **Right-Clicking** a grouped object.

The first option is **STATE**. This sets how the object behaves in SP.

The **STATE** options are:

FROZEN: Image will stay in place (it won't fall) until it is hit by another object, then regular Physics takes over.
