Enterprise Mac Administrators Guide CHARLES EDGE, William

Smith, 2015-11-28 Charles Edge and Bill Smith provide detailed explanations of the technology required for large scale Mac OS X deployments and show you how to integrate it with other operating systems and applications Now in its second edition Enterprise Mac Administrator s Guide addresses the growing size and spread of Mac OS X deployments in corporations and institutions worldwide In some cases this is due to the growth of traditional Mac environments but for the most part it has to do with organizations instituting device choice and switcher campaigns where Windows and or Linux environments are migrating to Mac OS X There is a steep culture shock with many of these migrations The products that are used are different the nomenclature is different and most importantly the best practices for dealing with the operating system and updates are very different Apple provides a number of tools to help automate and guide IT toward managing a large number of Mac OS X

computers it has since before Mac OS X was initially released. However, if you want to put together all of the pieces to tell a compelling story about how to run an IT department or a deployment of Macs, you need to compile information from a number of different sources. This book provides explanations of the technology required. What You'll Learn: Choose a directory services model that works for your organization and integrate it into your existing model. Choose an imaging model and begin imaging workstations with or without third-party products. Use the Mac App Store and Apple's Volume Purchasing Program to deploy apps. Leverage scripting techniques to reduce labor for the IT department. Provide network services: file sharing, mobile home folders, messaging, etc. to the Mac OS X clients. Who This Book Is For: System administrators and IT professionals who need to manage a large number of Mac OS X computers, be they Mac OS X-based servers or workstations. The assumption is that readers are somewhat familiar with Mac OS X and/or IT in general, but not that they are familiar with the Apple system internals, server services, or deployment techniques.
