GPU Computing Gems Jade Edition, 2011-11-02 GPU Computing Gems Jade Edition offers hands on proven techniques for general purpose GPU programming based on the successful application experiences of leading researchers and developers. One of few resources available that distills the best practices of the community of CUDA programmers, this second edition contains 100% new material of interest across industry including finance, medicine, imaging, engineering, gaming, environmental science and green computing. It covers new tools and frameworks for productive GPU computing application development and provides immediate benefit to researchers developing improved programming environments for GPUs. Divided into five sections, this book explains how GPU execution is achieved with algorithm implementation techniques and approaches to data structure layout. More specifically, it considers three general requirements: high level of parallelism, coherent memory access by threads within warps and coherent control flow within warps. Chapters explore topics such as accelerating database searches, how to leverage the Fermi GPU architecture to further accelerate prefix operations and GPU implementation of hash tables. There are also discussions on the state of GPU computing in interactive physics and artificial intelligence, programming tools and techniques for GPU computing and the edge and node parallelism approach for computing graph centrality metrics. In addition, the book proposes an alternative approach that balances computation regardless of node degree variance. Software engineers, programmers, hardware engineers and advanced students will find this book extremely useful. For useful source codes discussed throughout the book, the editors invite readers to the following website. This second volume of GPU Computing Gems offers 100% new material of interest across industry including finance, medicine, imaging, engineering, gaming, environmental science, green computing and more. Covers new tools and frameworks for productive GPU computing application development and offers immediate benefit to researchers developing improved programming environments for GPUs. Even more hands on proven techniques demonstrating how general purpose GPU computing is changing scientific research. Distills the best practices of the community of CUDA programmers, each chapter provides insights and ideas as well as hands on skills applicable to a variety of fields.

[Image Processing Using FPGAs](#)
Donald Bailey, 2019-06-11 This book presents a selection of papers representing current research on using field programmable gate arrays (FPGAs) for realising image processing algorithms. These papers are reprints of papers selected for a Special Issue of the Journal of Imaging on image processing using FPGAs. A diverse range of topics is covered, including parallel soft processors, memory management, image filters, segmentation, clustering, image analysis and image compression. Applications include traffic sign recognition for autonomous driving, cell detection for histopathology and video compression. Collectively, they represent the current state of the art on image processing using FPGAs.

Build a Large Language Model (From Scratch) Sebastian Raschka, 2024-10-29

Learn how to create, train, and tweak large language models (LLMs) by building one from the ground up. In *Build a Large Language Model from Scratch*, bestselling author Sebastian Raschka guides you step by step through creating your own LLM. Each stage is explained with clear text, diagrams, and examples. You'll go from the initial design and creation to pretraining on a general corpus and on to fine tuning for specific tasks. *Build a Large Language Model from Scratch* teaches you how to Plan and code all the parts of an LLM: Prepare a dataset suitable for LLM training, Fine tune LLMs for text classification and with your own data, Use human feedback to ensure your LLM follows instructions, Load pretrained weights into an LLM, Build a Large Language Model from Scratch takes you inside the AI black box to tinker with the internal systems that power generative AI. As you work through each key stage of LLM creation, you'll develop an in-depth understanding of how LLMs work, their limitations, and their customization methods. Your LLM can be developed on an ordinary laptop and used as your own personal assistant.

About the technology: Physicist Richard P. Feynman reportedly said, "I don't understand anything I can't build." Based on this same powerful principle, bestselling author Sebastian Raschka guides you step by step as you build a GPT-style LLM that you can run on your laptop. This is an engaging book that covers each stage of the process from planning and coding to training and fine tuning.

About the book: *Build a Large Language Model From Scratch* is a practical and eminently satisfying, hands-on journey into the foundations of generative AI. Without relying on any existing LLM libraries, you'll code a base model, evolve it into a text classifier, and ultimately create a chatbot that can follow your conversational instructions. And you'll really understand it because you built it yourself. What's inside: Plan and code an LLM comparable to GPT-2, Load pretrained weights, Construct a complete training pipeline, Fine tune your LLM for text classification, Develop LLMs that follow human instructions.

About the reader: Readers need intermediate Python skills and some knowledge of machine learning. The LLM you create will run on any modern laptop and can optionally utilize GPUs.
