ADePT User Guide Michael Lokshin, ADePT software enables users to analyze microdata from sources such as household surveys and generate print ready standardized tables and charts. It can also be used to simulate the impact of economic shocks, farm subsidies, cash transfers and other policy instruments on poverty, inequality and labor. The software automates the analysis, helps minimize human errors and encourages development of new economic analysis methods. ADePT supports datasets in Stata, SPSS and tab-delimited text formats. ADePT incorporates Numerics by Stata installed with ADePT as its computational engine. For each run, ADePT produces one output file containing your selection of tables and graphs, an optional original data summary and errors and notifications in Microsoft Excel format. Optionally, tables of standard errors and frequencies can be added to a report. **Stata User's Guide**, 2007-01-01 **Stata User's Guide** Stata Corporation, 2003

In the past decade, molecular biology has been transformed from the art of cloning a single gene to a statistical science measuring and calculating properties of entire genomes. New high-throughput methods have been developed for genome sequencing and studying the cell at different systematic levels such as transcriptome, proteome, metabolome and other 'omes'. At the heart of most high-throughput methods is the technique of polymerase chain reaction (PCR). PCR Primer Design focuses on primer design, which is critical to both the efficiency and the accuracy of the PCR. With intricate descriptions of basic approaches as well as specialized methods, this volume is an exceptional reference for all those involved in studying the genome. In PCR Primer Design, authors describe basic approaches for PCR primer design in addition to specialized methods. These state-of-the-art methods can be used for both genome-scale experiments and for small-scale individual PCR amplifications. This volume will be useful for organizations performing whole genome studies, companies designing instruments that utilize PCR, and individual scientists, geneticists, molecular biologists, molecular geneticists and more who routinely use PCR in their research.
