

# LAB #9: Station Models

## ***Background:***

The reporting of present weather conditions and the forecasting of future weather is the combined effort of thousands of weather stations throughout the world. More than 600 stations exist in the United States alone. These stations report their weather variables to the National Weather Service. This weather information is computerized, analyzed and plotted on weather maps. Weather maps can then help to forecast changes in the weather. Symbols and numbers are placed on the weather maps to represent the atmospheric variables at a particular place and time.

The challenge is that a large amount of data needs to be communicated to for weather station in the US. Because of the lack of space on weather maps, the weather information needs to be coded. In order to do this the information needs to be highly organized and standard throughout country. By using station models the data can be represented by a symbol or number, and its meaning is easily understood by where the symbol or number is placed on the station model.

Through this lab you will learn to understand station models used in meteorology by coding and decoding a variety of stations.

## ***Objectives:***

***At the conclusion of this lab, I will be able to...***

1. Analyze weather station models and determine weather factors found at those locations.
2. Draw weather station models accurately placing the weather factors in the correct position on the model.
3. Answer summary questions whose answers are based on the relationship of variables found on station models.
4. Use your knowledge of weather station models to determine weather conditions on two weather maps of the United States.

## ***Standards:***

## ***Materials:***

- Lab Report
- Earth Science Reference Tables

A reminder on decoding air pressure:

Step 1: If the coded pressure is higher than 500, add a 9 to the front. If 500 or less add a 10

Step 2: Place a decimal between the last two numbers

Ex1: 629 becomes 9629 becomes 962.9

Ex2: 255 becomes 10255 becomes 1025.5

A reminder on encoding pressure:

Step 1: Remove the decimal point

Step 2: Report the last three numbers

Ex1: 984.6 becomes 846

Ex2: 1000.3 becomes 003
