

PRINCIPLES OF EXPERIMENTAL DESIGN

- The basic principles of statistical design of experiments are:
 1. **Control** the effects of lurking variables on the response, most simply by comparing two or more treatments.
 2. **Randomize** – use impersonal chance to assign experimental units to treatments.
 3. **Replicate** each treatment on many units to reduce chance variation in the results.

The Design of Experiments R. Mead, 1990-07-26 In all the experimental sciences good design of experiments is crucial to the success of research Well planned experiments can provide a great deal of information efficiently and can be used to test several hypotheses simultaneously This book is about the statistical principles of good experimental design and is intended for all applied statisticians and practising scientists engaged in the design implementation and analysis of experiments Professor Mead has written the book with the emphasis on the logical principles of statistical design and employs a minimum of mathematics Throughout he assumes that the large scale analysis of data will be performed by computers and he is thus able to devote more attention to discussions of how all of the available information can be used to extract the clearest answers to many questions The principles are illustrated with a wide range of examples drawn from medicine agriculture industry and other disciplines Numerous exercises are given to help the reader practise techniques and to appreciate the difference that good design of experiments can make to a scientific project

Modern Experimental Design Thomas P. Ryan, 2006-12-22 A complete and well balanced introduction to modern experimental design Using current research and discussion of the topic along with clear applications Modern Experimental Design highlights the guiding role of statistical principles in experimental design construction This text can serve as both an applied introduction as well as a concise review of the essential types of experimental designs and their applications Topical coverage includes designs containing one or multiple factors designs with at least one blocking factor split unit designs and their variations as well as supersaturated and Plackett Burman designs In addition the text contains extensive treatment of Conditional effects analysis as a proposed general method of analysis Multiresponse optimization Space filling designs including Latin hypercube and uniform designs Restricted regions of operability and debarred observations Analysis of Means ANOM used to analyze data from various types of designs The application of available software including Design Expert JMP and MINITAB This text provides thorough coverage of the topic while also introducing the reader to new approaches Using a large number of references with detailed analyses of datasets Modern Experimental Design works as a well rounded learning tool for beginners as well as a valuable resource for practitioners
