Statistical Methods for Spatial Planning and Monitoring Silvestro Montrone, Paola

Perchinunno, 2012-10-24 The book aims to investigate methods and techniques for spatial statistical analysis suitable to model spatial information in support of decision systems Over the last few years there has been a considerable interest in these tools and in the role they can play in spatial planning and environmental modelling One of the earliest and most famous definition of spatial planning was a geographical expression to the economic social cultural and ecological policies of society borrowing from this point of view this text shows how an interdisciplinary approach is an effective way to an harmonious integration of national policies with regional and local analysis A wide range of spatial models and techniques is also covered spatial data mining point processes analysis nearest neighbor statistics and cluster detection Fuzzy Regression model and local indicators of spatial association all of these tools provide the policy maker with a valuable support to policy development
Evidence-Based Medicine and the Search for a Science of Clinical Care Jeanne Daly, 2005-05-11

Patient management is the central clinical task of medical care Until the 1970s there was no generally accepted method of ensuring a scientific critical approach to clinical decision making And while traditional clinical authority was under attack there was increasing concern about the way in which doctors made decisions about patient care In this book Jeanne Daly traces the origins essential features and achievements of evidence based medicine and clinical epidemiology over the past few decades Drawing largely on interviews with key players she offers unique insights into the ways that practitioners of evidence based medicine set out to generate scientific knowledge about patient care and how in the process they reshaped the way medicine is practiced and administered

Pharmageddon David Healy, 2013-04 This searing indictment David Healy's most comprehensive and forceful argument against the pharmaceuticalization of medicine tackles problems in health care that are leading to a growing number of deaths and disabilities Healy who was the first to draw attention to the now well publicized suicide inducing side effects of many anti depressants attributes our current state of affairs to three key factors product rather than process patents on drugs the classification of certain drugs as prescription only and industry controlled drug trials These developments have tied the survival of pharmaceutical companies to the development of blockbuster drugs so that they must overhype benefits and deny real hazards Healy further explains why these trends have basically ended the possibility of universal health care in the United States and elsewhere around the world He concludes with suggestions for reform of our currently corrupted evidence based medical system
