**Design of Blast Resistant Structures** Ramon Gilsanz, Ronald O. Hamburger, Darrell Barker, Joseph L. Smith, Ahmad Rahimian, 2013 [Guidelines for Siting and Layout of Facilities](#) CCPS (Center for Chemical Process Safety), 2018-04-24 This book has been written to address many of the developments since the 1st Edition which have improved how companies survey and select new sites evaluate acquisitions or expand their existing facilities. This book updates the appendices containing both the recommended separation distances and the checklists to help the teams obtain the information they need when locating the facility within a community when arranging the processes within the facility and when arranging the equipment within the process units

**Buildings and Structures under Extreme Loads** Chiara Bedon, Flavio Stochino, Daniel Honfi, 2020-11-25 Exceptional loads on buildings and structures may have different causes including high strain dynamic effects due to natural hazards man made attacks and accidents as well as extreme operational conditions severe temperature variations humidity etc. All of these aspects can be critical for specific structural typologies and or materials that are particularly sensitive to external conditions. In this regard dedicated and refined methods are required for their design analysis and maintenance under the expected lifetime. There are major challenges related to the structural typology and material properties with respect to the key features of the imposed design load. Further issues can be derived from the need for risk mitigation or retrofit of existing structures as well as from the optimal and safe design of innovative materials systems. Finally in some cases no appropriate design recommendations are available and thus experimental investigations can have a key role within the overall process. In this Special Issue original research studies review papers and experimental and or numerical investigations are presented for the structural performance assessment of buildings and structures under various extreme conditions that are of interest for design
