

This center link includes bushings for the pitman arm and other arms.

- **Other arms.**— The other arm bolts to the frame or subframe and attaches to the center link to support the linkage. It corresponds to the pitman arm to complete a strong and symmetrical linkage set. There are many different designs of other arms, and again, if the center link does not have a pivot socket or bushing at the connection, the other arm will.

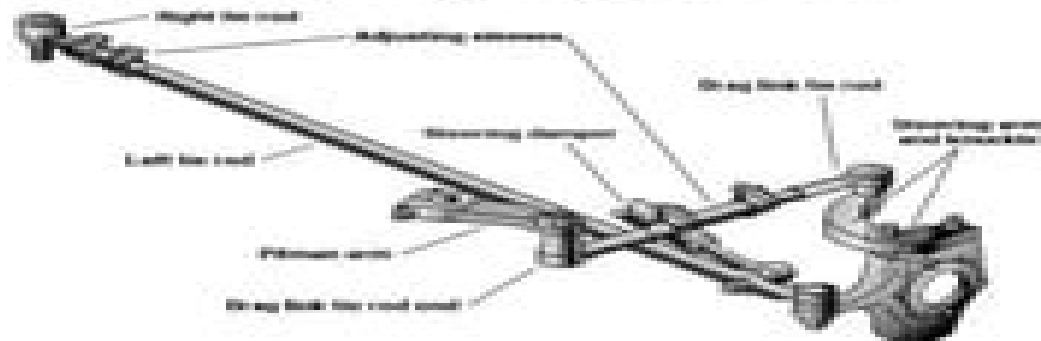

The other arm on the left contains a pivot for the center link.

Cross Steer and Multilinkage Linkage Systems

Other types of linkage systems have been used. Straight axle trucks and some four-wheel-drive steering linkage designs use one long tie rod assembly that connects to both of the steering knuckles in one arrangement. Cross steer linkage and Multilinkage linkage systems may be found on light and medium duty trucks.

Cross Steer Linkage

- This tie rod ends and an adjusting sleeve connecting the wheels.
- The left steering arm is connected to the steering gear with another tie rod assembly, sometimes called a drag link. The adjustment used on this assembly is used to center the steering wheel during a wheel alignment.
- Note that the pitman arm attaches to the steering gear with a pinch bolt in this application.
