Godfrey,Alexander Henry Waddell,1922 *Smoke Streams* Charles Townsend Ludington,1943 *Towards a neuroscience of social interaction* Ulrich Pfeiffer,Bert Timmermans,Kai Vogeley,Chris Frith,Leonhard Schilbach, The burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities However in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition i e social cognition from a detached observer s point of view asking study participants to read out the mental states of others without being engaged in interaction with them Consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience More recently a growing number of researchers have begun to study online social cognition i e social cognition from a participant s point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them Whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents Furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition In order to promote the development of the neuroscientific investigation of online social cognition this Frontiers Research Topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of at least two individuals and sometimes two brains rather than single individuals and brains responding to a social context Specifically this Research Topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms Here an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds For this Research Topic we therefore solicit reviews original research articles opinion and method papers which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations methodological innovations computational approaches developmental and patient studies By focusing on cutting edge research in social neuroscience and related fields this Frontiers Research Topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social

Experimental Heat Transfer, Fluid Mechanics and Thermodynamics 1993 M.D. Kelleher,R.K. Shah,K.R. Sreenivasan,Y. Joshi,2012-12-02 The papers contained in this volume reflect the ingenuity and originality of experimental

work in the areas of fluid mechanics heat transfer and thermodynamics The contributors are drawn from 27 countries which indicates how well the worldwide scientific community is networked The papers cover a broad spectrum from the experimental investigation of complex fundamental physical phenomena to the study of practical devices and applications A uniform outline and method of presentation has been used for each paper **Forest and Stream** ,1919 Sports of the Times ,1922 **Neural Plasticity for Rich and Uncertain Robotic Information Streams** Andrea Soltoggio, Frank van der Velde, 2016-10-31 Models of adaptation and neural plasticity are often demonstrated in robotic scenarios with heavily pre processed and regulated information streams to provide learning algorithms with appropriate well timed and meaningful data to match the assumptions of learning rules On the contrary natural scenarios are often rich of raw asynchronous overlapping and uncertain inputs and outputs whose relationships and meaning are progressively acquired disambiguated and used for further learning Therefore recent research efforts focus on neural embodied systems that rely less on well timed and pre processed inputs but rather extract autonomously relationships and features in time and space In particular realistic and more complete models of plasticity must account for delayed rewards noisy and ambiguous data emerging and novel input features during online learning Such approaches model the progressive acquisition of knowledge into neural systems through experience in environments that may be affected by ambiguities uncertain signals delays or novel features **Field Illustrated** ,1922 Proceedings of the ASME Heat Transfer Division ,2007 **The Sphinx** ,1921 The Manufacturer and Builder Peter Henri Van der Weyde, William Henry Wahl, 1884 Billed in early issues as a practical journal of industrial progress this monthly covers a broad range of topics in engineering manufacturing mechanics architecture building etc Later issues say it is devoted to the advancement and diffusion of practical knowledge Rivers of life, or Sources and streams of the faiths of man in all lands; showing the evolution of faiths from the rudest symbolisms to the latest spiritual developments James George Roche Forlong, 1883 **Factory, the Magazine of Management** ,1921 Proceedings of the ASME Heat Transfer Division--2005 ,2005 Factory ,1921 Treatise on Process Metallurgy Alexander McLean, Roderick Guthrie, Sridhar Seetharaman, H. Y.
