

## Series parallel circuits

There are two types of circuit we can make, called series and parallel.

The components in a circuit are joined by wires.

If there are no branches then it's a series circuit

If there are branches it's a parallel circuit

## Series circuits

In a television series, you get several episodes, one after the other. A series circuit is similar. You get several components one after the other.

If you follow the circuit diagram from one side of the cell to the other, you should pass through all the different components, one after the other, without any branches.

If you put more lamps into a series circuit, the lamps will be dimmer than before.

If a series circuit is broken and all the components stop working.

Series circuits are useful if you want a warning that one of the components in the circuit has failed. They also use less wiring than parallel circuits.
